## Acknowledgement

The Palestinian Central Bureau of Statistics would like to thank all Palestinian Households, who responded to the survey instrument, for their understanding during the fieldwork, which was truly remarkable.

The funding for this survey (Palestinian Expenditure and Consumption Survey 2009) was provided by the Palestinian National Authority (PNA), and the Core Funding Group (CFG) for 2009. represented by the Representative Office of Norway to PNA; and Swiss Agency for Development and Cooperation (SDC).

Moreover, PCBS very much appreciates the distinctive efforts of the Core Funding Group (CFG) for their valuable contribution to funding the report.

### **Notes for Users**

- Negligible differences can be noticed between summations of indicators due to rounding of numbers.
- The average household size should be taken into account in comparison between the indicators.
- The Symbol (-) in the tables means that there is insufficient observations in the cell.
- NIS, JD and US\$ were used in recording the value of Commodities and Services. The average exchange rate during the survey period was as follows:

Exchange Rate of New Israeli Shekel by Month 2009						
Month	Jordanian Dinar (JD)	US Dollar (US\$)				
January	5.72	3.86				
February	5.94	4.03				
March	5.55	4.06				
April	5.87	4.17				
May	5.63	4.00				
June	5.55	3.95				
July	5.60	3.92				
August	5.35	3.90				
September	5.34	3.82				
October	5.33	3.79				
November	5.36	3.81				
December	5.36	3.69

### **Preface**

The Palestinian Central Bureau of Statistics (PCBS) conducted the Tenth National Expenditure and Consumption Survey (PECS-X) between January 15, 2009 and January 14, 2010. The survey provides high quality data on the total consumption level and structure of Palestinian households, besides crucially supporting other statistical programs of PCBS such as the Consumer Price Index, National Accounts and Balance of Payments statistics.

The average household's total consumption is a very useful indicator about living standards of a population. Continuous monitoring of short-term changes in these living standards of the Palestinian population is of crucial importance given the very special situation of Palestine with political shocks to the economy at unpredictable intervals.

Given the day-to-day developments in political realities of the Palestinian situation, PECS-X provides an effective basis for analyzing the effects of border closures and other political shocks on the living standards of the population. This round of the Palestinian Expenditure and Consumption Survey is of particular importance. It shows effects of political events that occurred after the Palestinian election in 2006, especially the international siege and stringent closure policy on the movement of goods and people in the Occupied Palestinian Territory, both West Bank and Gaza Strip and into Israel, and on the depth of poverty and unemployment in the Palestinian society. The need to closely monitor these effects is quite obvious as dramatized by recent events and the continued unpredictability of political developments. The continuation of the PECS provides a unique opportunity to track changes in living standards, poverty, income distribution, and nutrition (food intake) over time. Changes in average total household's consumption and its distribution are then the key outcome indicators of economic activity, particularly in an economy where a majority of households are extremely vulnerable to adverse events.

High quality statistics on household's consumption would be the key indicator for continuously monitoring the precarious situation of Palestinian households and vulnerable groups in a timely manner, especially regarding effects of border closures and other political shocks; it would serve as a basis for planning in the Palestinian National Authority (PNA), and for donor policies, and facilitate monitoring the effects of these policies.

Based on these arguments, PCBS has decided that PECS should be undertaken annually, if possible, to monitor changes in living standards of the Palestinian population. We hope that the output from PECS-X, which has been carried out by PCBS, will be equally useful for Palestinian efforts toward establishing a better future for the people of Palestine.

October, 2010 Ola Awad

## **Executive Summary**

PCBS conducted the Tenth round of the Palestinian Expenditure and Consumption Survey (PECS-X) during the period January 15, 2009 – January 14, 2010.

The main objective of the survey was to continue monitoring the economic conditions of Palestinian households and their standards of living as Israeli measures continued against the PNA and the Palestinian population.

This round of the survey was based on a random sample of 4,699 households, of which 3,627 households completed the interview (2,654 in West Bank, and 973 in Gaza Strip, in addition to substituted data for 221 households), representing a response rate of 79.6% (85.5% in the West Bank, and 67.0% in Gaza Strip).

### Per Capita Monthly Expenditure 2009 (Current Prices)

Data revealed that per capita monthly expenditure was JD 131.1. The findings reflected a sharp difference in the average per capita monthly expenditure between Gaza Strip and the West Bank: JD 103.5 in Gaza Strip compared to JD 147.4 in the West Bank. The food share of total expenditure was 36.0% (35.0% in West Bank, and 38.6% in Gaza Strip). The percentage of per capita expenditure was14.4% on transport and communications (16.3% in the West Bank compared to 9.7% in Gaza Strip), and 10.8% on other goods\* (10.0% in the West Bank compared to 12.9% in Gaza Strip), on housing 8.7% (9.2% in the West Bank compared to 7.6% in Gaza Strip), while the expenditure on clothing and shoes was 7.0% (6.4% in the West Bank compared to 8.4% in Gaza Strip), 5.3% on housing equipment (5.3% in the West Bank compared to 7.1% in Gaza Strip), 4.1% on tobacco and cigarettes (5.0% in the West Bank compared to 1.9% in Gaza Strip), 3.4% on educational groups (3.4% in the West Bank compared to 3.6% in Gaza Strip), 2.7% on personal care (2.5% in the West Bank compared to 2.9% in Gaza Strip), 2.1% on recreation (2.3% in the West Bank and 1.6% in Gaza Strip).

Also, data reveals there are differences according to type of locality; the average per capita monthly expenditure in urban localities amounted to JD 135.0 against JD 126.1 and JD 115.6 in rural localities and camps, respectively.

## **Household's Expenditure 2009 (Current Prices):**

The results of the Palestinian expenditure and consumption survey indicated that the average monthly household's expenditure on various goods and services amounted to 789.3 JD (855.0 JD in the West Bank compared with 662.1 JD in Gaza Strip), taking into consideration that the average household's size was 5.8 in West Bank and 6.4 in Gaza Strip, (according to the Palestinian expenditure and consumption survey, 2009). The different values of this indicator from the results of census and other household surveys are due to the difference of methodology and sample size.

The share of expenditure on food to total household's expenditure was 36.0% (35.0% in the West Bank compared with 38.6% in Gaza Strip). While data indicated that expenditure on transport and communications groups ranked second in terms of its share of the total expenditure of Palestinian households and its share was 14.4% (16.3% in the West Bank compared with 9.8% in Gaza Strip).

The expenditure on housing, and clothing and shoes groups came in third and fourth respectively in terms of the share to the total expenditure, housing and clothing percentage of expenditure was 8.7% and 7.0%, respectively (9.2% in the West Bank against 7.6% in Gaza

Strip for housing, and for clothing the percentage was 6.4% in the West Bank compared with 8.4% in Gaza Strip).

On the other hand, the total monthly expenditure on household's equipment was 42.6 JD (45.6 JD in the West Bank, 36.7 JD in Gaza Strip) which represented a percentage of 5.4% of the total Palestinian household's expenditure. The total expenditure on medical care was 41.7 JD (38.8 JD in the West Bank compared to 47.4 JD in Gaza Strip) which represented a percentage of 5.3% of the total Palestinian household's expenditure.

Results indicated that the monthly household's expenditure on tobacco and cigarettes has exceeded household's expenditure on education, personal care and recreational activities, where the amount of the monthly household expenditure on tobacco and cigarettes was 32.3 JD (42.5 JD in the West Bank compared with 12.6 JD in Gaza Strip), while the average monthly household's expenditure on education, personal care and recreational activities was 27.3, 21.0, 16.4 JD respectively.

By the type of locality, the monthly household's expenditure was 808.0 JD in urban areas, 758.6 JD in rural, and 699.1 JD in camps.

# Average Monthly Per Capita Quantity Consumption of Food Products in the Palestinian Territory:

- The average quantity of per capita monthly consumption of cereals products and bread was 9.8 kg.
- The average quantity of per capita monthly consumption of meat and poultry was 3.7 kg.
- The average quantity of per capita monthly consumption of milk was 0.6 litres, of yogurt (0.8 litres) and of different types of cheese (0.2 kg.).
- The average quantity of per capita monthly consumption of fresh fruits was 5.1 kg.
- The average quantity of per capita monthly consumption of fresh vegetables was 8.3 kg.

### Per Capita Daily Average Consumption of Food and Nutrients:

The table below shows the main results of per capita daily average consumption of food and nutrients in 2006-2009.

Daily Average Food Energy and Nutrient Availability Per Capita in the Palestinian Territory, 2006- 2009

Energy and Selected Nutrients	2006	2007	2009	Quantity Code
Energy	2481.6	2067.7	1687.0	Kcal
Protein	64.8	57.0	40.3	Gram
Fat	63.4	57.4	55.2	Gram
Carbohydrates	408.0	327.0	254.7	Gram
Water	801.2	580.0	566.7	Gram
Calcium	850.7	652.1	707.6	MI gram
Vitamin C	178.8	122.3	125.9	MI gram
Phosphate	965.3	841.7	720.3	MI gram
Iron	16.6	14.0	13.0	MI gram
Sodium	5544.8	5412.5	6008.3	MI gram
Potassium	2756.7	2216.4	2102.8	MI gram
Magnesium	349.3	282.0	274.9	MI gram
Vitamin A	438.9	383.4	381.6	MI gram

include tobacco, alcoholic beverages, other non-food expenditure, social protection, and other than foods.

### Chapter One

#### Introduction

### 1.1 Background

The Palestinian Central Bureau of Statistics (PCBS) carried out the Tenth Expenditure and Consumption Survey during the period January 15, 2009– January 14, 2010.

The main purpose of this survey is to provide information on standards of living and patterns of consumption and expenditure among Palestinian households in the West Bank and Gaza Strip. The data collected by this survey serves different uses, including:

- Social studies on living standards and poverty.
- Nutrition studies, particularly for vulnerable groups.
- Documentation of living conditions of Palestinians in the Palestinian Territory as a unique historical record.
- Weights for the consumer price index.
- Compiling the National Accounts.
- Market research as the basis for marketing strategies for private firms
- Social development.

This report presents the final results for the twelve rounds of the survey, January 2009 through January 2010.

### 1.2 Concepts and Definitions

#### **Household:**

It refers to one person or group of persons (with or without a family relationship) who live in the same dwelling unit, who share meals and make joint provisions for food and other essentials of living.

### **Head of household:**

The person who usually lives with the household and is recognized as head of household by its other members. Often he/she is the main decision maker and is responsible for financial support and welfare of the household.

### **Household Expenditure:**

It refers to the amount of Cash spent on purchase of goods and services for living purposes, and the value of goods and services payments or part of payments received from the employer, and Cash expenditure spent as taxes (non-commercial or non-industrial), gifts, contributions, interests on debts and other non-consumption items.

### **Household Consumption:**

It refers to the amount of Cash spent on purchase of goods and services for living purposes, and The value of goods and service payments or part of payments received from the employer, and own-produced goods and food, including consumed quantities during the recording period, and Imputed rent.

### **Recording period:**

It refers to the temporal point during which data on household expenditure and consumption are recorded. It includes one month for record keeping, and twelve months for the last visit interview on durable goods.

### **Dependency ratio:**

It refers to the ratio of the elderly (those 65 years and over) plus the young (those under 15 year of age) to the population in the working age (between 15-64 years of age).

### **Level of Living:**

It refers to food consumption divided by Total Consumption. This indicator is based on the following assumption: the Level of Living is identified by the proportion of consumption on food out of the total consumption (Angles Law of Poverty), as if the food share is increased the other shares of health, education, and housing is decreased. It is distributed to three categories:1. Better-off: "Food Consumption to Total Consumption less than 30%"2. Middle category: "Food Consumption to Total Consumption between 30-44%"3. Worse-off: "Food Consumption to Total Consumption between 45-100%".

### Other-non consumption expenditure:

I Interests on loans, fees and taxes.

### Other non-food consumption expenditures:

Financial and legal services, advertisement fees, copy services, translation and printing, writing and drawing equipment, tickets for traveling abroad, jewelry, watches, precious stones, etc.

#### **Income:**

Cash or in kind revenues for individual or household within a period of time; could be a week or a month or a year.

#### **Main Source of Income:**

The more consistent and regular income. The sources of income are:

- Wages and Salaries.
- Net Income for employers or self employed.
- Net property Income.
- Net current Transfers.

### \*Lorenz Curve:

It is usually used to measure inequalities in the distribution of wealth or income. To plot the curve, the units are first either arrayed individually or grouped in class intervals according to the appropriate independent variety. Then the cumulative percentage of the number of areas (Y) is plotted against the cumulative percentage of population (X). For comparison, a diagonal line is drawn at 45 degrees to show the condition of equal distribution. The Gini concentration ratio measures the proportion of the total area under the diagonal that lies in the area between the diagonal and the Lorenz Curve.

### Chapter Two

### **Main Findings**

### 2.1 Per Capita Monthly Expenditure 2009 (Current Prices)

Data revealed that per capita monthly expenditure was (JD 131.1). Data showed a distinct difference between the average per capita monthly expenditure in Gaza Strip and the West Bank, amounting to (JD 103.5) in Gaza Strip compared to (JD 147.4) in the West Bank. The food share of total expenditure was 36.0% (35.0% in West Bank, and 38.6% in Gaza Strip).

The average per capita monthly expenditure was 14.4% on transport and communication (16.3% in the West Bank compared to 9.7% in Gaza Strip), and 10.8% on other goods "zakat, taxes, presents, and other groups" (10.0% in the West Bank compared to 12.9% in Gaza Strip). Regarding housing, the average per capita monthly expenditure was 8.7% (9.2% in the West Bank compared to 7.6% in Gaza Strip), while the expenditure on clothing and shoes was 7.0% (6.4% in the West Bank compared to 8.4% in Gaza Strip). Moreover, the average per capita monthly expenditure was 5.4% on housing equipment (5.3% in the West Bank compared to 5.5% in Gaza Strip), 5.3% on medical care (4.5% in the West Bank compared to 7.1% in Gaza Strip), 4.1% on tobacco and cigarettes (5.0% in the West Bank compared to 1.9% in Gaza Strip), while 3.4% on educational groups (3.4% in the West Bank compared to 3.6% in Gaza Strip). Regarding personal care, the average per capita monthly expenditure was 2.7% (2.5% in the West Bank compared to 2.9% in Gaza Strip), while 2.1% on recreation (2.3% in the West Bank and 1.6% in Gaza Strip).

Also, data reveals that there are differences according to type of locality; the average per capita monthly expenditure in urban localities amounted to JD 135.0 against JD 126.1 and 115.6 JD in rural and camps, respectively.

### 2.2 Per Capita Monthly Expenditure and Consumption 2009 (Current Prices)

The average per capita monthly consumption in the Palestinian Territory reached (JD 141.3), with an average of (JD 160.7) in the West Bank compared to (JD 108.3) in Gaza Strip. The share of food groups to total consumption was 34.9% which was the highest share among all other groups; while in the West Bank it reached 34.0%, compared to 37.3% in Gaza Strip.

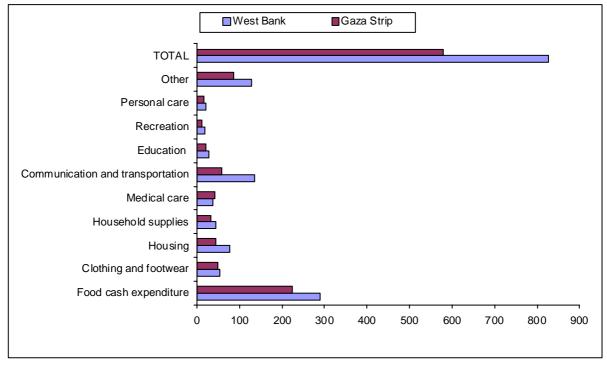

The average per capita monthly expenditure in the Palestinian Territory on bread and cereals was (JD 8.1), on meat and poultry (JD 12.0), on fish and sea products (JD 1.1), on dairy products and eggs (JD 3.8), on oil and fat (JD 1.7), on fruits and nuts (JD 3.9), on vegetables, legumes and tubers (JD 6.2), on sugar and confectionery (JD 2.5), on other food (JD 2.4), on take away food and meals in restaurants (JD 3.3), and on own produced food in kind consumed or given away (JD 2.1).

- Exchange rate for Jordanian Dinar by Israelian shekel =5.6 for 2009, 5.8 for 2007, 6.3 for 2006, and 6.3 for 2005.
- \*include tobacco, alcoholic beverages, other non-food expenditure, social protection, own produced non-food in kind, cash transfer, and Taxes.
- 2008 data not available.
- There is a small difference between this table and expenditure table foe per capita, and this difference come from roundation.

Figure 1: Average Monthly Per Capita Expenditure in New Israeli Shekels (NIS) in West Bank and Gaza Strip by Commodities and Services Groups, 2009 (at current prices)

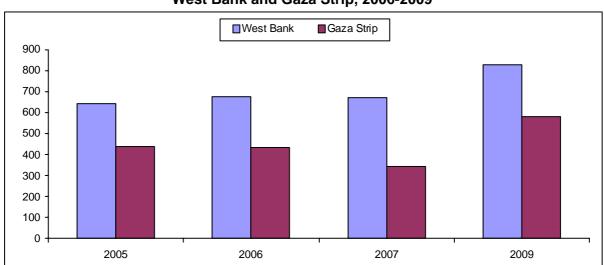

Figure 2: Total Average Monthly Per Capita Expenditure in New Israeli Shekels (NIS) in West Bank and Gaza Strip, 2006-2009

### 2.3 Household's Monthly Expenditure 2009 (Current Prices)

A household's monthly expenditure in the Palestinian Territory (average household consisting of 6.0 persons) between January 2009 and January 2010 was (JD 789.3). In the West Bank (average household consisting of 5.8 persons), the average reached (JD 855.0) compared to (JD 662.1) in Gaza Strip (average household consisting of 6.4 persons). The average household's size according to the Palestinian expenditure and consumption survey, 2009 is different from the results of census and other household surveys due to different of methodology and sample size.

Results indicated that the average household's monthly expenditure in the Palestinian Territory on housing was (JD 68.9), on transport and communication (JD 114.0), on clothing (JD 55.2), on furniture utensils and household operations (42.6 JD), on medical care (41.7 JD), on education and recreation (JD 27.3), on personal care and its needs (JD 21.0) and on tobacco and cigarettes (JD 32.3), on zakat and charities in cash, taxes in cash, gifts in cash, etc. (JD 85.5).

## 2.4 Household's Monthly Consumption 2009 (Current Prices)

Data revealed that the average household's monthly consumption in the Palestinian Territory (household consisting of 6.0 persons) between January 2009 and January 2010 was (JD 850.6), while in the West Bank (household consisting of 5.8 persons) it averaged (JD 932.0) compared to (JD 692.8) in Gaza Strip ((household consisting of 6.4 persons). Thus the average total monthly household's consumption in the West Bank exceeds its equivalent in Gaza Strip by 34.5%.

Data indicated that the average household's monthly consumption in the Palestinian Territory on bread and cereals reached (JD 48.6), on meat and poultry (JD 72.5), on fish and sea products (JD 6.8), on dairy products and eggs (JD 23.2), on oil and fat (JD 10.3), on fruits and nuts (JD 23.5), on vegetables, legumes and tubers (JD 37.3), on sugar and confectionery (JD15.1), on non-alcoholic beverages (JD 12.8), on other food (JD 14.4), on take away food and meals in restaurant (JD 19.8), and on own produced food in kind consumed or given away (JD 12.9).

### 2.5 Average Monthly Per Capita Quantity Consumption of Food Products

The findings in this section are based on quantities recorded by households and reviewed by the interviewer. The data copying procedures from family records to the questionnaire was checked, and validation rules were applied to ensure internal consistency. Mistakes were corrected to ensure compliance with the standard rules. In addition to these validation rules, other rules of data cleaning were applied to check the logic of quantities and prices.

# A. Average Monthly Per Capita Quantity Consumption of Food Products in the Palestinian Territory:

- The average quantity of per capita monthly consumption of cereals products and bread was 9.8 kg of which: 1.6 kg of rice, 4.3 kg of flour, 0.1 kg of wheat and 2.7 kg of bread.
- The average quantity of per capita monthly consumption of meat was 1.2 kg of which: 0.2 kg of mutton (sheep and goat meat), 0.6 kg of beef.
- The average quantity of per capita monthly consumption of chicken meat was 2.5 kg.
- The average quantity of per capita monthly consumption of fish and sea products was 0.4 kg.
- The average quantity of per capita monthly consumption of milk was 0.6 litres, 0.8 litters of yogurt and 0.2 kg of different types of cheese.
- The average quantity of per capita monthly consumption of eggs was 0.6 kg.
- The average quantity of per capita monthly consumption of olive oil and other oils were 0.3 litres and 0.7 litres, respectively. The average quantity of household's monthly consumption of the various types of fats (animal and plant) was 0.1 kg.
- The average quantity of per capita monthly consumption of fresh fruits was 5.1 kg.
- The average quantity of per capita monthly consumption of crackers (mixed nuts) was 0.2 kg.
- The average quantity of per capita monthly consumption of fresh vegetables was 8.3 kg.
- The average quantity of per capita monthly consumption of tubers was 2.1 kg.
- The average quantity of per capita monthly consumption of sugar was 1.5 kg.
- The average quantity of per capita monthly consumption of salt was 0.4 kg.

# B. Average Monthly Per Capita Quantity Consumption of Food Products in the West Bank:

- The average quantity of per capita monthly consumption of cereals products and bread was 9.3 kg of which: 1.8 kg of rice, 3.1 kg of flour, 0.2 kg of wheat and 3.1 kg of bread.
- The average quantity of per capita monthly consumption of meat was 1.1 kg of which: 0.2 kg of mutton (sheep and goat meat), 0.5 kg of beef.
- The average quantity of per capita monthly consumption of chicken meat was 2.7 kg.
- The average quantity of per capita monthly consumption of fish and sea products was 0.3 kg.
- The average quantity of per capita monthly consumption of milk was 0.8 litres, 0.9 litres of yogurt and 0.3 kg of different types of cheese.
- The average quantity of per capita monthly consumption of eggs was 0.5 kg.
- The average quantity of per capita monthly consumption of olive oil and other oils were 0.4 litres and 0.6 litres, respectively. The average quantity of household's monthly consumption of the various types of fats (animal and plant) was 0.1 kg.
- The average quantity of per capita monthly consumption of fresh fruits was 4.9 kg.
- The average quantity of per capita monthly consumption of crackers (mixed nuts) was 0.2 kg.
- The average quantity of per capita monthly consumption of fresh vegetables was 7.8 kg.
- The average quantity of per capita monthly consumption of tubers was 1.8 kg.

- The average quantity of per capita monthly consumption of sugar was 1.4 kg
- The average quantity of per capita monthly consumption of salt was 0.4 kg.

# C. Average Monthly Per Capita Quantity Consumption of Food Products in Gaza Strip:

- The average quantity of per capita monthly consumption of cereals products and bread was 10.7 kg of which: 1.0 kg of rice, 6.7 kg of flour, 0.1 kg of wheat and 1.7 kg of bread.
- The average quantity of per capita monthly consumption of meat was 1.4 kg of which: 0.1 kg of mutton (sheep and goat meat), 0.8 kg of beef.
- The average quantity of per capita monthly consumption of chicken meat was 2.1 kg.
- The average quantity of per capita monthly consumption of fish and sea products was 0.5 kg.
- The average quantity of per capita monthly consumption of milk was 0.2 litres, 0.6 litres of yogurt and 0.2 kg of different types of cheese.
- The average quantity of per capita monthly consumption of eggs was 0.6 kg.
- The average quantity of per capita monthly consumption of olives oil and other oils was 0.1 litre and 0.8 litres, respectively. The average quantity of household's monthly consumption of the various types of fats (animal and plant) was 0.1 kg.
- The average quantity of per capita monthly consumption of fresh fruits was 5.4 kg.
- The average quantity of per capita monthly consumption of crackers (mixed nuts) was 0.2 kg.
- The average quantity of per capita monthly consumption of fresh vegetables was 9.4 kg.
- The average quantity of per capita monthly consumption of tubers was 2.7 kg.
- The average quantity of per capita monthly consumption of sugar was 1.6 kg.
- The average quantity of per capita monthly consumption of salt was 0.4 kg.

## 2.6 Average Monthly Household's Quantity Consumption of Food Products by Region

# A. Average Monthly Household's Quantity Consumption of Food Products in the Palestinian Territory:

- The average quantity of household's monthly consumption of cereals products and bread was 58.8 kg of which: 9.4 kg of rice, 25.8 kg of flour, 0.8 kg of wheat and 16.0 kg of bread
- The average quantity of household's monthly consumption of meat was 5.2 kg of which: 1.3 kg of mutton (sheep and goat meat), 3.4 kg of beef.
- The average quantity of household's monthly consumption of poultry was 14.8 kg.
- The average quantity of household's monthly consumption of fish and sea products was 2.3 kg.
- The average quantity of household's monthly consumption of milk was 3.7 litres, 4.9 litres of yogurt and 1.4 kg of different types of cheese.
- The average quantity of household's monthly consumption of eggs was 3.4 kg.
- The average quantity of household's monthly consumption of olive oil and other oils were 1.7 litres and 4.0 litres, respectively. The average quantity of household's monthly consumption of the various types of fats (animal and plant) was 0.2 kg.
- The average quantity of household's monthly consumption of fresh fruits was 30.4 kg.
- The average quantity of household's monthly consumption of crackers (mixed nuts) was 1.0 kg.
- The average quantity of household's monthly consumption of fresh vegetables was 50.0 kg.
- The average quantity of household's monthly consumption of tubers was 12.6 kg.

- The average quantity of household's monthly consumption of sugar was 8.9 kg.
- The average quantity of household's monthly consumption of salt was 2.4 kg.

# B. Average Monthly Household's Quantity Consumption of Food Products in the West Bank:

- The average quantity of household's monthly consumption of cereals products and bread was 54.5 kg of which: 10.7 kg of rice, 18.3 kg of flour, 2.4 kg of wheat and 18.2 kg of bread
- The average quantity of household's monthly consumption of meat was 5.1 kg of which: 1.4 kg of mutton (sheep and goat meat), 2.8 kg of beef.
- The average quantity of household's monthly consumption of poultry was 15.5 kg
- The average quantity of household's monthly consumption of fish and sea products was 1.7 kg.
- The average quantity of household's monthly consumption of milk was 4.9 litres, 5.5 litres of yogurt and 1.6 kg of different types of cheese.
- The average quantity of household's monthly consumption of eggs was 3.2 kg.
- The average quantity of household's monthly consumption of olive oil and other oils was 2.1 litres and 3.4 litres, respectively. The average quantity of household's monthly consumption of the various types of fats (animal and plant) was 0.2 kg.
- The average quantity of household's monthly consumption of fresh fruits was 28.6 kg.
- The average quantity of household's monthly consumption of crackers (mixed nuts) was 1.0 kg.
- The average quantity of household's monthly consumption of fresh vegetables was 45.5kg.
- The average quantity of household's monthly consumption of tubers was 10.7 kg.
- The average quantity of household's monthly consumption of sugar was 8.2 kg.
- The average quantity of household's monthly consumption of salt was 2.2 kg.

# C. Average Monthly Household's Quantity Consumption of Food Products in Gaza Strip:

- The average quantity of household's monthly consumption of cereals products and bread was 68.8 kg of which: 6.6 kg of rice, 42.6 kg of flour, 0.5 kg of wheat and 11.0 kg of bread.
- The average quantity of household's monthly consumption of meat was 8.8 kg of which: 0.9 kg of mutton (sheep and goat meat), 5.0 kg of beef.
- The average quantity of household's monthly consumption of poultry was 13.4 kg
- The average quantity of household's monthly consumption of fish and sea products was 3.5 kg.
- The average quantity of household's monthly consumption of milk was 1.3 litres, 3.5 litres of yogurt and 1.1 kg of different types of cheese.
- The average quantity of household's monthly consumption of eggs was 3.8 kg.
- The average quantity of household's monthly consumption of olives oil and other oils was 0.8 litres and 5.4 litres, respectively. The average quantity of household's monthly consumption of the various types of fats (animal and plant) was 0.2 kg.
- The average quantity of household's monthly consumption of fresh fruits was 34.7 kg.
- The average quantity of household's monthly consumption of crackers (mixed nuts) was 1.1 kg.
- The average quantity of household's monthly consumption of fresh vegetables was 60.3 kg.
- The average quantity of household's monthly consumption of tubers was 17.1 kg.

- The average quantity of household's monthly consumption of sugar was 10.5 kg.
- The average quantity of household's monthly consumption of salt was 2.8 kg.

# 2.7 Per Capita Daily Consumption of Energy and Nutrients

In this section, the main indicators of per capita daily consumption of energy and food and nutrients are presented:

# A. Daily Average Food Energy and Nutrient Availability Per Capita in the Palestinian Territory, 2009:

Energy and Selected Nutrients	Quantity	Quantity Code	Energy and Selected Nutrients	Quantity	Quantity Code
Energy	1687.0	Kcal	Phosphate	720.3	MI gram
Proteins	40.3	Gram	Iron	13.0	MI gram
Fat	55.2	Gram	Sodium	6008.3	MI gram
Carbohydrates	254.7	Gram	Potassium	2102.8	MI gram
Water	566.7	Gram	Magnesium	274.9	MI gram
Calcium	707.6	MI gram	Vitamin A	381.6	MI gram
Vitamin C	125.9	MI gram			

# B. Daily Average Food Energy and Nutrient Availability Per Capita in the West Bank, 2009

Energy and Selected Nutrients	Quantity	Quantity Code	Energy and Selected Nutrients	Quantity	Quantity Code
Energy	1755.9	Kcal	Phosphate	763.7	MI gram
Protein	43.1	Gram	Iron	12.7	MI gram
Fat	56.8	Gram	Sodium	5905.7	MI gram
Carbohydrates	265.5	Gram	Potassium	2059.3	MI gram
Water	567.6	Gram	Magnesium	268.7	MI gram
Calcium	639.6	MI gram	Vitamin A	368.1	MI gram
Vitamin C	117.1	MI gram			

# C. Daily Average Food Energy and Nutrient Availability Per Capita in Gaza Strip, 2009

Energy and Selected Nutrients	Quantity	Quantity Code	Energy and Selected Nutrients	Quantity	Quantity Code
Energy	1571.9	Kcal	Phosphate	643.0	MI gram
Protein	35.1	Gram	Iron	14.0	MI gram

Carbohydrates	236.6	Gram	Potassium	2219.3	MI gram
Water	572.7	Gram	Magnesium	290.9	MI gram
Calcium	854.0	MI gram	Vitamin A	413.8	MI gram
Vitamin C	145.4	MI gram			

### Chapter Three

### Methodology

#### 3.1 Introduction

The PECS questionnaire was designed following the UN/ILO recommendations for Household Budget Surveys practiced in most countries. These recommendations follow the concept of National Accounts System 1993 (SNA, 93) and other changes based on the COICOP system pertinent to the classification of household/personal consumption as in the case in most consumption surveys in most countries.

The methodology of the survey is summarized as follows:

- The sample is stratified cluster systematic random sample with two stages, and 12 sub samples were used as one sub sample for each month.
- The duration of the survey is 12 months. The design of the survey took into consideration the seasonality in the consumption where it varies from one season to another like expenditure on fruit, vegetables and cloths.
- Each household was provided with a registration form (diary) where household would fill in daily expenditures. A female fieldworker would visit the household repeatedly 8-10 times to ensure registration of household's consumption in the diary according to the adopted procedures.
- The registration period for each household is restricted to one month. Households with longer registration periods than one month are given less variance in the expenditure and consumption pattern. One of the disadvantages to longer registration periods is that households would get bored or forget to fill in the specified form. The UN\ILO recommendations call for a registration period of three to four weeks. PCBS selected a four-week registration period to cover household's expenditures on goods and services that are repeated during the month.
- Different time references were adopted for the items of household's expenditure and consumption. The daily expenditure on food and transportation items was given a one-month reference period. Durable goods and educational fees are given 12-months reference period excluding personal transportation which is extended to the previous three years. Regarding income, a one month and one year reference periods were used.

### 3.2 The questionnaire

The questionnaire consists of two main parts:

### First: Survey's questionnaire

Part of the questionnaire is to be filled in during the visit at the beginning of the month, while the other part is to be filled in at the end of the month. The questionnaire includes:

**Control sheet:** Includes household's identification data, date of visit, data on the fieldwork and data processing team, and summary of household's members by gender.

**Household roster:** Includes demographic, social, and economic characteristics of household's members.

**Source of income and consumer durable goods schedule:** Includes list of main goods like washing machine, refrigerator, TV, and sources of income generation like ownership of farm land or animals.

**Housing characteristics:** Includes data like type of housing unit, number of rooms, value of rent, and connection of housing unit to basic services like water, electricity and sewage. In addition, data in this section includes source of energy used for cooking and heating, distance of housing unit from transportation, education, and health centers.

**Monthly and annual income:** Data pertinent to household's income from different sources is collected at the end of the registration period.

### **Second: List of goods**

The classification of the list of goods is based on the recommendation of the United Nations for the SNA under the name Classification of Personal Consumption by purpose. The list includes 50 groups of expenditure and consumption where each is given a sequence number based on its importance to the household starting with food goods, clothing groups, housing, medical treatment, transportation and communication, and lastly durable goods. Each group consists of important goods. The total number of goods in all groups amounted to 667 items for goods and services. Groups from 1-21 includes goods pertinent to food, drinks and cigarettes. Group 22 includes goods that are home produced and consumed by the household. The groups 23-45 include all items except food, drinks and cigarettes. The groups 50-55 include durable goods. The data is collected based on different reference periods to represent expenditure during the whole year except for cars where data is collected for the last three years.

## **3.3 Registration form**

The registration form includes instructions and examples on how to record consumption and expenditure items. The form includes columns:

- Monetary: If the good is purchased, or in kind: if the item is self produced.
- Title of the service of the good
- Unit of measurement (kilogram, liter, number)
- Quantity
- Value

The pages of the registration form are colored differently for the weeks of the month. The footer for each page includes remarks that encourage households to participate in the survey. The following are instructions that illustrate the nature of the items that should be recorded:

- Monetary expenditures during purchases
- Purchases based on debts
- Monetary gifts once presented
- Interest at pay
- Self produced food and goods once consumed
- Food and merchandise from commercial project once consumed
- Merchandises once received as a wage or part of a wage from the employer.

### 3.4 Sampling and Sampling Frame

### 3.4.1 Target Population

It consists of all Palestinian households who are staying normally resident in the Palestinian Territory during 2009.

### 3.4.2 Sampling Frame

The sampling frame consists of all enumeration areas which were enumerated in 2007, each numeration area consists of buildings and housing units with average of about 120 households in it. These enumeration areas are used as primary sampling units PSUs in the first stage of the sampling selection.

### 3.4.3 Sample size

The estimated sample size for the Expenditure and Consumption survey 2009 is 4,584 for the whole year in addition of 115 households over sample. Thus, the sample size is 4,699 households. The non-response rate is estimated for the total sample is around 20%.

### 3.4.4 Sample design

The sample is two stage stratified cluster sample with two stages:

First stage: selection a systematic random sample of 191 enumeration areas.

**Second stage**: selection a systematic random sample of 24 households from each enumeration area selected in the first stage.

**Note:** in Jerusalem Governorate (J1), 13 enumeration areas were selected; then in the second phase, a group of households from each enumeration area were chosen using census-2007 method of delineation and enumeration. This method was adopted to ensure household response is to the maximum to comply with the percentage of non-response as set in the sample design.

Enumeration areas were distributed to twelve months and the sample for each quarter covers sample strata (Governorate, locality type)

### **Sample strata:**

The population was divided by:

- 1- Governorate
- 2- Type of Locality (urban, rural, refugee camps)

### 3.5 Weights Calculation

The weight of statistical units (sampling unit) in the sample is defined as the mathematical inverse of the selection probability where The sample of the survey is two stage stratified cluster sample. Thus, the weights are calculated for each stage and the Households Weights is the multiplication of the two weights.

#### First stage weight:

The sample of enumeration areas is selected and the weight is called enumeration areas weight (the sampling unit is enumeration areas).

The weight for enumeration areas from stratum h by the design of sample is calculated by dividing the # of enumeration areas in stratum h on the sample size of enumeration areas in stratum h by the following equation (1):

$$W_{ih} = \frac{M_h}{n_h}$$

Where

h The code of stratum h by Governorate and locality type

 $W_{ih}$  The weight of enumeration area i in stratum h

 $M_h$  The # of enumeration areas in the stratum h from 2007 frame

 $n_h$  The sample size of enumeration areas in stratum h

### **Second stage weight:**

The sample of households is selected and the weight is called household weight (the sampling unit is household).

Household weight is calculated from enumeration area (cluster) k by dividing number of households in each cluster with the sample size of households within the cluster k, using the following formula equation (2):

$$W_{ik} = \frac{M_k}{n_k}$$

Where

*k* Cluster code for the household *i* 

 $W_{ik}$  Weight of household i in the cluster k

 $M_k$  Number of households in the cluster k from the population census in 2007

 $n_k$  The sample households from cluster k

The primary weight of households before modification is the multiplication of the weights of the first and second stages.

Then we adjust the primary weights for the households to compensate for the non response of households by calculate adjustment factor for households weights by adjustment levels (Governorate and locality type) by using households projections by adjustment levels in 2009 by the following equation (3):

$$f_h = \frac{m_h}{\sum_{i=1}^{nh} wi}$$

 $m_h$  The adjustment factor for the adjustment levels h

$$\sum_{i=1}^{nh} wi$$

The # of households in adjustment level h from households projections in 2009

The sum of the primary households weights in adjustment level h

Then the final weight for the households (FHW) is a multiplications of the adjustment factor (fh) by the primary weights for the household by the following equation (4):

$$FHW = w_h * f_h$$

**Remark:** Weights are calculated for responded households assuming that this would compensate for non-responded households in the Gaza Strip.

### 3.6 Field Operations

Four teams of female interviewers, three in the West Bank and one in the Gaza Strip carried out data collection. Each team consisted of a supervisor, and 10-20 female interviewers.

Fieldwork teams were distributed according to their place of residence. All field staff received a training session combining general theoretical and practical components.

### 3.7 Data Processing

Both data entry and tabulation were performed using the ACCESS and SPSS software programs. Data entry was organized in 6 files, corresponding to the main parts of the questionnaire. A data entry template was designed to reflect an exact image of the questionnaire, and included various electronic checks: logical check, range checks, consisting checks and cross-validation. Complete manual inspection of results after data entry was performed, and questionnaires containing field-related errors were corrected.

### Chapter Four

### **Data Quality**

There are many aspects to the concept of data quality that includes the initial planning of the survey to the dissemination of the results and how well users understand and use the data. There are three components to the quality of statistics: relevancy, reliability, and credibility. Relevancy includes demographic variables, reference period, statistical measures, details of data, and comparability of results.

### 4.1 Accuracy of the Data

### **4.1.1 Statistical Errors**

Since the study is based on a sample survey and not on a complete enumeration, the data is subject to sampling errors as well as non-sampling errors.

Data of this survey can be affected by statistical errors due to use of the sample. Therefore, certain differences are expected in comparison with the real values obtained through censuses. Variations were calculated for the most important indicators and that shows the ability to disseminate results at the regional level. However, dissemination of data at the Governorate level indicates values of certain averages of expenditure with high variations as explained in the statistical tables.

#### 4.1.2 Non-Statistical Errors

Non-statistical errors in general referred to the nature of PECS, which can be summarized as follows:

- Many households considered the specific details of the survey as intervention into their own life.
- Israeli impact on the Palestinian Territory (curfew and closure).
- Some households thought the survey is related to social assistance or to taxes.
- Hesitation of households in the Jerusalem area to give their data because they were afraid of the Israeli procedures against them if they participate in any Palestinian survey or activity.
- Non-statistical errors in the survey: Because households were away from home or refused to participate. The overall refusal rate amounted to almost 8.7% after the first visit. However, the refusal rate reached last year 21.7% and this is due to the adopted approach of area sample in Jerusalem (J1) where 24 households were listed from each enumeration area in the sample.

The implementation of the survey encountered non-response cases because the household was not present at home during the fieldwork visit or the housing unit is vacant or the household refused to participate.

The total non-response rate reached 20.43% which is relatively low once compared to same type of surveys in other countries. The refusal rate reached 6.9% and the percentage of non completed questionnaires reached 8.1% and these percentages are less than last year's.

### **4.2 Response Rates**

The survey sample consists of about 4,699 households of which 3,627 households completed the interview; whereas 2,654 households from the West Bank and 973 households in Gaza Strip (in addition to 221 households in Gaza Strip that estimated their data, because no data collected for these households according to the situation in Gaza Strip). Weights were modified to account for non-response rate. The response rate in the West Bank reached 85.5% while in the Gaza Strip it reached 67%.

3,627		
3,047	Refused to cooperate	325
74	Vacant Housing unit	127
14	No available information	6
161	Other	74
	14	14 No available information

### unable to reach household Gaza Strip Because of the circumstances: 291 households

### Response and non-response formulas:

### Response and non-response rates

Percentage of over coverage errors = Total cases of over coverage

Number of cases in original sample

= 3%

Non response rate = Total cases of non response \* 100%

Net Sample size

Net sample = Original sample – cases of over coverage Response rate = 100% - non-response rate = 79.57%

=20.43%

Treatment of non-response cases using adjustment groups:

$$fg = \frac{\sum_{ng} wi - \sum_{o.c} wi}{\sum_{rg} wi}$$

Where

 $\sum_{ng} wi$  Total weights in group g

 $\sum_{o.cg} wi$  Total weights considered over coverage

 $\sum_{rg} wi$  Total weights responded in the survey

Each unit is given the value fg to the group that belongs to it, then w'i is calculated using the following formula:

$$w'gi = wi * fgi$$

### **4.3 Data Comparison**

A comparison between survey data and previous surveys occurred at the macro level, and the tables of comparisons were presented into the main findings chapter.

### 4.4 Quality control

The impact of errors on the data quality was reduced to the minimal due to the high efficiency and outstanding selection, training, and performance of the fieldworkers.

# Procedures adopted during the fieldwork of the survey were considered a necessity to ensure the collection of accurate data, notably:

- Develop schedules to conduct field visits to households during survey fieldwork. The objectives of the visits and the data that is collected on each visit were predetermined.
- Fieldwork editing rules were applied during the data collection to ensure corrections were implemented before the end of fieldwork activities
- Fieldworker were instructed to provide details in case of extreme expenditure or consumption of the household.
- Postpone the questions on income to the last visit at the end of the month
- Validation rules were embedded in the data processing systems along with procedures to verify data entry and data editing.

# **4.5 Technical Notes**

There are important technical notes that should be taken into consideration when reviewing this report, which are as follows:

- Re- interviewing was cancelled to reduce the burden at the household as well as the fieldworker.
- Increasing the sample size compared with previous years to allow dissemination at a more detailed level.
- For comparison purposes, it is important to use indicators on persons
- Because of the circumstances in Gaza Strip, 291 household were not interviewed (unable to reach household).
- In comparing data with previous years, it is important to take into consideration the declining of the exchange rate of major currencies (American Dollar, Jordanian Dinar) against the NIS. A table of exchange rates was included in this report.
