Preface

Construction is considered one of the important economic activities in the Palestinian economy. It contributes substantially to the Gross Domestic Product, recruits a large share of employees, and directly influences several other economic activities. Building construction in particular represents one of the major construction activities in general.

It has been necessary for the Palestinian Central Bureau of Statistics (PCBS) to establish statistical database that covers several aspects of construction activities in order to accommodate the different needs of users. The annual economic surveys series conducted by PCBS as of 1994 includes a survey for construction contractors. PCBS had also conducted the annual Existing Buildings Survey starting from the reference year 1996.

PCBS is pleased to present this report of Building Licenses Statistics, which provides statistical data on the size, and characteristics of licensed buildings in the Palestinian Territory for the Second Quarter 2007.

Statistical data is currently collected through filling the designated from the administrative records of the different official licenses issuing authorities. This was initiated on quarterly basis since the Second Quarter of 1996.

Publication of building licenses statistics will be pursued in the following years. PCBS hopes that the means by which these data are archived in the issuing authorities are developed, in the foreseeable future, in a manner that would reduce cost and time needed for preparing these statistics.

Summary Results

This report covers data for the Second Quarter 2007.

The main findings of this quarter are as follow:

1. Number of licenses: The number of building licenses issued in the Second Quarter 2007 totaled 1,175 and distributed as follows:
 - 615 licenses for new buildings
 - 273 licenses for additions to licensed buildings
 - 40 licenses for additions and existing parts
 - 231 licenses for existing buildings
 - 16 licenses for existing extensions
2. Licensed areas: The total areas of licensed buildings (residential & non residential) amounted to 451.0 thousand m² distributed as follows:
 - 360.6 thousand m² for new areas, of which 268.4 are residential and 92.2 non-residential.
 - 90.4 thousand m² for existing areas, of which 72.6 are residential and 17.8 non-residential.
3. Licensed boundary walls: 47 licenses issued for walls with total length of 4.5 thousand meters.
4. Number and area of dwellings licensed:
 - New dwellings: 1,597 units with a total area of 238.1 thousand m².
 - Existing dwellings: 389 units with a total area of 67.1 thousand m².

There was an obvious decline in the total number of issued building licenses when the Second Quarter of 2007 was compared with the Second Quarter in the three previous years; the decline was 13.3% when compared with the Second Quarter 2004, 26.5% when compared with the Second Quarter 2005, and 36.1% when compared with the Second Quarter 2006.

The results showed that in the Second Quarter 2007 the number of new dwellings decreased by 27.2%, and the number of existing dwellings increased by 37.0% compared with the same Quarter 2004. There was a 34.5% decrease in the number of new dwellings and 11.8% in the number of existing dwellings when the Second Quarter 2007 was compared with the same Quarter 2005. The decrease for new & existing dwellings was 22.9% and 58.1% respectively for the Second Quarter 2007 when compared with Second Quarter 2006.

The results showed in general an obvious decline in building license indicators during the Second Quarter 2007 compared with the Second Quarter 2004, 2005 and 2006.

Executive Summary

1. Introduction:

Construction is considered an important economic activity, particularly in countries undergoing economic development. This activity plays a vital role in the Palestinian economy and is significantly interrelated to other economic activities. The Palestinian Central Bureau of Statistics (PCBS) is committed to compiling statistical data on all aspects of construction activity in order to measure the main related variables.

Administrative record statistics shed light on the size and type of building licenses issued by official parties. Building license statistics are compiled by most countries. In addition to its own importance, building license statistics constitute the sampling frame for other surveys to be launched concerning identification of the actual constructed buildings against licenses, estimating construction costs and obtaining data on the technical characteristics of these buildings.

2. Objectives:

These statistics provide data on the number of building licenses and licensed areas, and number and area of licensed dwellings and stores considering the following variables:

- Issuing authorities.
- Geographic location.
- Status of the buildings to be licensed (new, existing, new or existing additions, etc.).
- Building ownership (private, governmental, local authorities, cooperative, etc.).
- Utilization of the building (residential, non-residential: industrial, commercial, educational, etc.).

*Excluding boundary wall licenses

The results showed an obvious drop for building licenses indicators during the Second Quarter 2007 compared with the Second Quarter 2004-2006, despite some vacillation in some indicators, compared with same period or pervious quarters for the same years.

There was an obvious decline in the total number of issued building licenses when the Second Quarter of 2007 was compared with the Ssecond Quarter in the three previous years; the decline was 13.3% when compared with the Second Quarter 2004, 26.5% when compared with the Second Quarter 2005, and 36.1% when compared with the Second Quarter 2006.

The following figure shows the number of building licenses issued in Remaining West Bank and Gaza Strip - 2004, 2005, 2006, 2007 (Second Quarter):

5. Data Quality

5.1 Accuracy of the Data

5.1.1 Statistical Errors

The survey was implemented on the basis of a comprehensive census for all studied statistical units (Licenses); therefore this survey was free of statistical (sampling) errors.

5.1.2 Non-Statistical Errors

Non-statistical errors are probable in all stages of the project, during data collection or processing. In this survey it is mostly referred to data entry errors. To avoid errors and reduce their effects, great efforts were made to train data entry staff. They were trained on the entry

program that was examined before starting the data entry process, and preparing data entry program before data collection for checking readiness of the program for data entry. A set of validation rules was applied to the program for checking consistency of data. Periodic data files were received by project management for checking accuracy and consistency, and notes of correction were provided for data entry management for correction.

5.2 Comparison of the Data

Comparison exercises were done with previous years surveys of Building Licenses for the same quarter, and the results reveal consistency with previous survey data.

5.3 Technical Notes

There are important technical notes which should be taken into consideration when reviewing this report, which are as follows:

- Tables exclude building licenses for those parts of Jerusalem which were annexed illegally by Israel in 1967, while they include licenses for some villages of Jerusalem Governorate.
- It may be noticed that the details of the value of some indicators may not add up to its total, due to rounding calculations.
