Acknowledgement

The Palestinian Central Bureau of Statistics would like to thank all Palestinian Households, who responded to the survey instrument, for their understanding during the fieldwork, which was truly remarkable.

The funding for this survey (Palestinian Expenditure and Consumption Survey 2007) was provided by the Palestinian National Authority (PNA), and the Core Funding Group (CFG) for 2007. CFG member include by Representative Office of Norway to PNA; Representative Office of Netherlands to PNA; Swiss Agency for Development and Cooperation (SDC).

On this occasion, the PCBS extends special thanks to the members of the Core Funding Group (CFG) who contributed in funding this survey for this support.

Notes for Users

- Negligible differences can be noticed between summations of indicators due to rounding of numbers.
- The Average household size should be taken into account in comparison between the indicators.
- The Symbol (-) in the tables means that there is insufficient observations in the cell.
- NIS, JD and US\$ were used in recording the value of Commodities and Services. The average exchange rate during the survey period was as follows:

Exchange Rate of New Israeli Shekel by Month 2007				
Month	Jordanian Dinar (JD)	US Dollar (US\$)		
January	5.96	4.22		
February	5.95	4.21		
March	5.93	4.19		
April	5.76	4.10		
Мау	5.64	3.99		
June	5.89	4.17		
July	6.00	4.31		
August	5.98	4.23		
September	5.78	4.09		
October	5.67	4.01		
November	5.57	3.92		
December	5.50	3.88

Preface

The Palestinian Central Bureau of Statistics, PCBS, conducted the eighth national Expenditure and Consumption Survey (PECS-VIII) between January 15, 2007 and January 14, 2008. The survey yielded high quality data on the total consumption level and structure of Palestinian households, besides crucially supporting other statistical programs of PCBS such as the consumer price index, national accounts and balance of payments statistics.

Average household total consumption is a very useful indicator about living standards of a population. Continuous monitoring of short-term changes in these living standards of the Palestinian population is of crucial importance given the very special situation of Palestine with political shocks to the economy at unpredictable intervals.

Given the day-to-day developments in political realities of the Palestinian situation, PECS-VIII provides an effective basis for analyzing the effects of border closures and other political shocks on the living standards of the population. This round of the Palestinian Expenditure and Consumption Survey is of particular importance. It shows effects of political events which occurred after the Palestinian election in 2006, especially the international siege and stringent closure policy on the movement of goods and people in the Occupied Territories of Palestine, both West Bank and Gaza Strip and into Israel, and on the depth of poverty and unemployment in Palestinian society. The need to closely monitor these effects is quite obvious as dramatized by recent events and the continued unpredictability of political developments. The continuation of the PECS provides a unique opportunity to track changes in living standards, poverty, income distribution, and nutrition (food intake) over time. Changes in average total household consumption and its distribution are then the key outcome indicators of economic activity, particularly in an economy where a majority of households are extremely vulnerable to adverse events.

High quality statistics on household consumption would be the key indicator for continuously monitoring the precarious situation of Palestinian households and vulnerable groups in a timely manner, especially regarding effects of border closures and other political shocks; it would serve as a basis for planning in the Palestinian National Authority (PNA), and for donor policies, and facilitate monitoring the effects of these policies.

Based on these arguments, PCBS has decided that PECS should be undertaken annually, if possible, to monitor changes in living standards of the Palestinian population. We hope that the output from PECS-VIII, which has been carried out by PCBS, will be equally useful for Palestinian efforts toward establishing a better future for the people of Palestine.

Executive Summary

PCBS conducted the eighth round of the Palestinian Expenditure and Consumption Survey (PECS-VIII) during the period January 15, 2007 – January 14, 2008.

The main objective of the survey was to continue monitoring the economic conditions of Palestinian households and their standards of living as Israeli measures continued against the PNA and the Palestinian population.

This round of the survey was based on a random sample of 1,714 households, of which 1,231 households completed the interview; representing a response rate of 71.8% (of which 812 were in the West Bank and 419 households were in Gaza Strip).

Per Capita Monthly Expenditure 2007 (Current Prices)

Data revealed that per capita monthly expenditure was JD 95.4. The data revealed a sharp difference in the average per capita monthly expenditure between Gaza Strip and the West Bank: JD 59.8 in Gaza Strip compared to JD 116.3 in the West Bank. The food share of total expenditure was 36.8% (35.4% in the West Bank and 41.3% in Gaza Strip).

The percentage of per capita monthly expenditure on housing was (6.6%), on transport and communication (14.6%), on clothing (7.1%), on furniture, utensils and household operations (6.3%), on medical care (4.7%), on education and recreation (5.9%), on personal care and its needs (2.6%) and on tobacco and cigarettes (4.6%), on zakkat and charities in cash, taxes in cash, gifts in cash, etc. (10.7%).

Also, data reveals there are differences according to type of locality; the average per capita monthly expenditure in urban localities amounted to JD 102.7 against JD 94.5 and JD 69.4 in rural and camps, respectively.

Household Expenditure 2007 (Current Prices):

- The average household's monthly expenditure in the Palestinian Territory (household consisting of 6.4 persons) was (JD 607.8) Jordanian Dinars, and the results indicated that food share of total expenditure was 36.8%.
- The average household's monthly expenditure in the West Bank (household consisting of 6.1 persons) was (JD 707.7), and the results indicated that food share of total expenditure was 35.4%.
- The average household's monthly expenditure in Gaza Strip (household consisting of 6.9 persons) was (JD 414.5), and the results indicated that food share of total expenditure was 41.4%.
- The average household's monthly expenditure in the Palestinian Territory (household consisting of 6.4 persons) spent on clothing was (JD 43.6), on dwelling (JD 40.3), spent on furniture, utensils and household operations (JD 38.1), spent on health care (JD 28.5), spent on education and recreation (JD 35.7), and on transport and communication (JD 88.6).
- Place of residence was another factor by which expenditure varies. The average household's monthly expenditure was (JD 651.3) in urban areas compared with (JD 600.9) in rural and (JD 453.9) in refugee camps.

Average Monthly Per Capita Quantity Consumption of Food Products in the Palestinian Territory:

- The average quantity of per capita monthly consumption of cereals products and bread was 8.9 kg.
- The average quantity of per capita monthly consumption of meat and poultry was 3.4 kg.
- The average quantity of per capita monthly consumption of milk was 0.7 litres, of yogurt (0.7 litres) and of different types of cheese (0.2 kg.).
- The average quantity of per capita monthly consumption of fresh fruits was 4.9 kg.
- The average quantity of per capita monthly consumption of fresh vegetables was 8.2 kg.

Per Capita Daily Average Consumption of Food and Nutrients:

The table below shows the main results of per capita daily average consumption of food and nutrients in 2006-2007.

Daily Average Food Energy and Nutrient Availability Per Capita in Palestinian Territory, 2006- 2007

Chapter One

Introduction

1.1 Background

The Palestinian Central Bureau of Statistics (PCBS) carried out the Eighth Expenditure and Consumption Survey (PECS-VIII) during the period January 15, 2007 – January 14, 2008.

The main purpose of this survey is to provide information on standards of living and patterns of consumption and expenditure among Palestinian households in the West Bank and Gaza Strip. The data collected by this survey has many different uses, including:

- Social studies on living standards and poverty.
- Nutrition studies, particularly for vulnerable groups.
- Documentation of living conditions of the Palestinians in the Palestinian Territory as a unique historical record.
- Weights for the consumer price index.
- Compiling the National Accounts.
- Market research as the basis for marketing strategies for private firms
- Social development.

This report presents the Final results for the twelve rounds of the survey, January 2007 through January 2008.

1.2 Concepts and Definitions

Household: One person or group of two or more persons with or without a family

relationship who live in the same dwelling unit, who share meals and

make joint provisions for food and other essentials of living.

Head of household: The person who usually lives with the household and is recognized

as head of household by its other members. Often, he/she is the main decision-maker and is responsible for financial support and welfare

of the household.

Expenditure: Includes the following:

- Cash spent on purchase of goods and services for living purposes.
- The value of goods and services payments or part of payments received from the employer.
- Cash expenditure spent as taxes (non-commercial or non-industrial), gifts, contributions, interests on debts and other non-consumption items.

Consumption: Includes the following:

- Cash spent on purchase of goods and services for living purposes.
- The value of goods and service payments or part of payments received from the employer.
- Own-produced goods and food, including consumed quantities during the recording period.
- Estimated rent value of the dwelling.

Recording period:

The temporal point during which data on household expenditure and consumption are recorded. It includes one month for record keeping, and twelve months for the last visit interview on durable goods.

Dependency ratio:

It is number of dependent household members divided by number of independent household members.

dependent: household members less than 15 years of age and members 65 years of age or more

independent: household members between 15 years of age and 64 years of age.

Level of Living:

= Food Consumption divided by Total Consumption.

This indicator is based on the following assumption: the Level of Living is identified by the proportion of consumption on food out of the total consumption (Angles Law of Poverty).

It is distributed to three categories:

- Better-off: "Food Consumption to Total Consumption less than 30%".
- Middle category: "Food Consumption to Total Consumption between 30-44%".
- Worse-off: "Food Consumption to Total Consumption between 45-100%".

Other-non consumption expenditure

Interests on loans, fees and taxes.

Other non-food consumption expenditures:

Financial and legal services, advertisement fees, copy services, translation and printing, writing and drawing equipment, tickets for traveling abroad, jewelry, watches, precious stones, etc.

Income

Cash or in kind revenues for individual or household within a period of time; could be a week or a month or a year.

Main Source Income

of The more consistent and regular income. The sources of income are:

- Wages and Salaries.
- Net Income for employers or self employed.
- Net property Income.
- Net current Transfers.

*Lorenz Curve:

It is usually used to measure inequalities in the distribution of wealth or income. To plot the curve, the units are first either arrayed individually or grouped in class intervals according to the appropriate independent variate. Then the cumulative percentage of the number of areas (Y) is plotted against the cumulative percentage of population (X). For comparison a diagonal line is drawn at 45 degrees to show the condition of equal distribution. The Gini concentration ratio measures the proportion of the total area under the diagonal that lies in the area between the diagonal and the Lorenz Curve.

Chapter Two

Main Findings

2.1 Per Capita Monthly Expenditure 2007(Current Prices):

Data revealed that per capita monthly expenditure was (JD 95.4). Data showed a distinct difference between the average per capita monthly expenditure in Gaza Strip and the West Bank, amounting to (JD 59.8) in Gaza Strip compared to (JD 116.3) in the West Bank. The food share of total expenditure was 36.8% (35.4% in the West Bank and 41.3% in Gaza Strip).

The average per capita monthly expenditure on housing was (JD 6.3), on transport and communication (JD 13.9), on clothing (JD 6.8), on furniture, utensils and household operations (JD 6.0), on medical care (JD 4.5), on education and recreation (JD 5.6), on personal care and its needs (JD 2.5), on tobacco and cigarettes (JD 4.4), on zakkat and charities in cash, taxes in cash, gifts in cash, etc. (JD 10.5).

Also, data reveals there are differences in expenditure according to type of locality: the average per capita monthly expenditure in urban localities amounted to (JD 102.7) compared to (JD 94.5) and (JD 69.4) in rural areas and refugee camps, respectively.

2.2 Per Capita Monthly Expenditure and Consumption 2007(Current Prices):

The average per capita monthly consumption in the Palestinian Territory (JD 106.1), in the West Bank averaged (JD 129.9) against (JD 65.4) in Gaza Strip. The share of food groups to total consumption was 33.1% which was the highest share among all other groups; in the West Bank it was 33.3 %, and 38.5% in Gaza Strip.

The average per capita monthly expenditure in the Palestinian Territory on bread and cereals was (JD 5.5), on meat and poultry (JD 9.4), on fish and sea products (JD 0.7), on dairy products and eggs (JD 2.9), on oil and fat (JD 1.3), on fruits and nuts (JD 2.9), on vegetables, legumes and tubers (JD 4.7), on sugar and confectionery (JD 2.1), on other food (JD 1.8), on take away food and meals in restaurants (JD 2.3), and on own produced food in kind consumed or given away (JD 1.5).

2.3 Household Monthly Expenditure 2007(Current Prices):

A household monthly expenditure in the Palestinian Territory (household consisting of 6.4 persons) between January 2006 and January 2007 was (JD 607.8). In the West Bank (household consisting of 6.1 persons) it averaged (JD 707.7) against (JD 414.5) in Gaza Strip (household consisting of 6.9 persons). Thus the average of total monthly household expenditure in the West Bank exceeds its equivalent in the Gaza Strip by 70.7%.

Results indicated the average household's monthly expenditure in the Palestinian Territory on housing was (JD 40.3), on transport and communication (JD 88.6), on clothing (JD 43.6), on furniture utensils and household operations (38.1 JD), on medical care (28.5 JD), on education and recreation (JD 35.7), on personal care and its needs (JD 16.2) and on tobacco and cigarettes (JD 28.1), on zakkat and charities in cash, taxes in cash, gifts in cash, etc. (JD 65.4).

2.4 Household Monthly Consumption 2007(Current Prices):

Data revealed the average household's monthly consumption in the Palestinian Territory (household consisting of 6.4 persons) between January 2006 and January 2007 was (JD 676.0), in the West Bank (household consisting of 6.1 persons) it averaged (JD 790.8) against (JD 453.8) in Gaza Strip ((household consisting of 6.9 persons). Thus the average total monthly household consumption in the West Bank exceeds its equivalent in Gaza Strip by 74.3%.

Data indicated the average household's monthly consumption in the Palestinian Territory on bread and cereals is (JD 34.8), on meat and poultry (JD 59.8), on fish and sea products (JD 4.2), on dairy products and eggs (JD 18.7), on oil and fat (JD 8.1), on fruits and nuts (JD 18.6), on vegetables, legumes and tubers (JD 30.0), on sugar and confectionery (JD13.3), on non-alcoholic beverages (JD 10.5), on other food (JD 11.5), on take away food and meals in restaurant (JD 14.4), and on own produced food in kind consumed or given away (JD 9.6).

2.5 Average Monthly Per Capita Quantity Consumption of Food Products:

The findings in this section are based on quantities recorded by households and reviewed by the interviewer. The data copying process from family records to the questionnaire was checked, validation rules were applied for checking internal consistency, and mistakes corrected that appeared as a result of using these rules. In addition to these validation rules other rules of cleaning were applied to the data to check the logic of quantities and prices. We present the main indicator (the per capita average monthly consumption of food products by region):

A. Average Monthly Per Capita Quantity Consumption of Food Products in the Palestinian Territory:

- The average quantity of per capita monthly consumption of cereals products and bread was 8.9 kg distributed as follows: 1.4 kg of rice, 3.7 kg of flour, 0.5 kg of wheat and 2.6 kg of bread.
- The average quantity of per capita monthly consumption of meat and poultry was 3.4 kg distributed as follows: 0.3 kg of mutton (sheep and goat meat), 0.5 kg of beef and 2.3 kg of chicken meat.
- The average quantity of per capita monthly consumption of fish and sea products was 0.3 kg.
- The average quantity of per capita monthly consumption of milk was 0.7 litres, 0.7 litters of yogurt and 0.2 kg of different types of cheese.
- The average quantity of per capita monthly consumption of eggs was 0.5 kg.
- The average quantity of per capita monthly consumption of olive oil and other oils were 0.4 litres and 0.5 litres, respectively. The average quantity of household monthly consumption of the various types of fats (animal and plant) was 0.1 kg.
- The average quantity of per capita monthly consumption of fresh fruits was 4.9 kg.
- The average quantity of per capita monthly consumption of crackers (mixed nuts) was 0.2 kg.

- The average quantity of per capita monthly consumption of fresh vegetables was 8.2 kg.
- The average quantity of per capita monthly consumption of tubers was 1.9 kg.
- The average quantity of per capita monthly consumption of sugar was 1.2 kg.
- The average quantity of per capita monthly consumption of salt was 0.4 kg.

B. Average Monthly Per Capita Quantity Consumption of Food Products in the West Bank:

- The average quantity of per capita monthly consumption of cereals products and bread was 8.7 kg distributed as follows: 1.8 kg of rice, 2.8 kg of flour, 0.1 kg of wheat and 3.1 kg of bread.
- The average quantity of per capita monthly consumption of meat and poultry was 3.9 kg distributed as follows: 0.4 kg of mutton (sheep and goat meat), 0.5 kg of beef and 2.6 kg of chicken meat.
- The average quantity of per capita monthly consumption of fish and sea products was 0.2 kg.
- The average quantity of per capita monthly consumption of milk was 0.9 litres, 0.9 litres of yogurt and 0.3 kg of different types of cheese.
- The average quantity of per capita monthly consumption of eggs was 0.5 kg.
- The average quantity of per capita monthly consumption of olive oil and other oils were 0.5 litres and 0.5 litres, respectively. The average quantity of household monthly consumption of the various types of fats (animal and plant) was 0.1 kg.
- The average quantity of per capita monthly consumption of fresh fruits was 5.2 kg.
- The average quantity of per capita monthly consumption of crackers (mixed nuts) was 0.2 kg.
- The average quantity of per capita monthly consumption of fresh vegetables was 7.7 kg.
- The average quantity of per capita monthly consumption of tubers was 1.6 kg.
- The average quantity of per capita monthly consumption of sugar was 1.2 kg
- The average quantity of per capita monthly consumption of salt was 0.3 kg.

C. Average Monthly Per Capita Quantity Consumption of Food Products in Gaza Strip:

■ The average quantity of per capita monthly consumption of cereals products and bread was 9.3 kg distributed as follows: 0.9 kg of rice, 5.5 kg of flour, 0.1 kg of wheat and 1.8 kg of bread.

- The average quantity of per capita monthly consumption of meat and poultry was 2.5 kg distributed as follows: 0.02 kg of mutton (sheep and goat meat), 0.5 kg of beef and 1.6 kg of chicken meat.
- The average quantity of per capita monthly consumption of fish and sea products was 0.4 kg.
- The average quantity of per capita monthly consumption of milk was 0.4 litres, 0.4 litres of yogurt and 0.1 kg of different types of cheese.
- The average quantity of per capita monthly consumption of eggs was 0.5 kg.
- The average quantity of per capita monthly consumption of olives oil and other oils was 0.2 litre and 0.7 litres, respectively. The average quantity of household monthly consumption of the various types of fats (animal and plant) was 0.1 kg.
- The average quantity of per capita monthly consumption of fresh fruits was 4.5 kg.
- The average quantity of per capita monthly consumption of crackers (mixed nuts) was
 0.1 kg.
- The average quantity of per capita monthly consumption of fresh vegetables was 9.2 kg.
- The average quantity of per capita monthly consumption of tubers was 2.6 kg.
- The average quantity of per capita monthly consumption of sugar was 1.3 kg.
- The average quantity of per capita monthly consumption of salt was 0.4 kg.

2.6 Average Monthly Household Quantity Consumption of Food Products:

We present the main indicator (the household average monthly consumption of food products by region):

A. Average Monthly Household Quantity Consumption of Food Products in the Palestinian Territory:

- The average quantity of household monthly consumption of cereals products and bread was 56.8 kg distributed as follows: 9.3 kg of rice, 23.9 kg of flour, 0.6 kg of wheat and 16.7 kg of bread.
- The average quantity of household monthly consumption of meat and poultry was 24.6 kg distributed as follows: 1.8 kg of mutton (sheep and goat meat), 3.0 kg of beef and 14.4 kg of chicken meat.
- The average quantity of household monthly consumption of fish and sea products was 1.7 kg.
- The average quantity of household monthly consumption of milk was 4.6 litres, 4.7 litres of yogurt and 1.2 kg of different types of cheese.
- The average quantity of household monthly consumption of eggs was 3.3 kg.
- The average quantity of household monthly consumption of olive oil and other oils were 2.3 litres and 3.5 litres, respectively. The average quantity of household monthly consumption of the various types of fats (animal and plant) was 0.4 kg.

- The average quantity of household monthly consumption of fresh fruits was 31.3 kg.
- The average quantity of household monthly consumption of crackers (mixed nuts) was
 1.0 kg.
- The average quantity of household monthly consumption of fresh vegetables was 52.1 kg.
- The average quantity of household monthly consumption of tubers was 12.4 kg.
- The average quantity of household monthly consumption of sugar was 8.0 kg.
- The average quantity of household monthly consumption of salt was 2.3 kg.

B. Average Monthly Household Quantity Consumption of Food Products in the West Bank:

- The average quantity of household monthly consumption of cereals products and bread was 53.2 kg distributed as follows: 10.7 kg of rice, 17.0 kg of flour, 0.6 kg of wheat and 18.9 kg of bread.
- The average quantity of household monthly consumption of meat and poultry was 23.8 kg distributed as follows: 2.7 kg of mutton (sheep and goat meat), 2.9 kg of beef and 16.0 kg of chicken meat.
- The average quantity of household monthly consumption of fish and sea products was 1.1 kg.
- The average quantity of household monthly consumption of milk was 5.4 litres, 5.6 litres of yogurt and 1.3 kg of different types of cheese.
- The average quantity of household monthly consumption of eggs was 3.2 kg.
- The average quantity of household monthly consumption of olive oil and other oils was 2.9 litres and 3.0 litres, respectively. The average quantity of household monthly consumption of the various types of fats (animal and plant) was 0.4 kg.
- The average quantity of household monthly consumption of fresh fruits was 31.4 kg.
- The average quantity of household monthly consumption of crackers (mixed nuts) was 1.0 kg.
- The average quantity of household monthly consumption of fresh vegetables was 47kg.
- The average quantity of household monthly consumption of tubers was 9.9 kg.
- The average quantity of household monthly consumption of sugar was 7.5 kg.
- The average quantity of household monthly consumption of salt was 2.0 kg.

C. Average Monthly Household Quantity Consumption of Food Products in Gaza Strip:

■ The average quantity of household monthly consumption of cereals products and bread was 64.4 kg distributed as follows: 6.1 kg of rice, 38.2 kg of flour, 0.5 kg of wheat and 12.2 kg of bread.

- The average quantity of household monthly consumption of meat and poultry was 17.2 kg distributed as follows: 0.1 kg of mutton (sheep and goat meat), 3.2 kg of beef and 11.1 kg of chicken meat.
- The average quantity of household monthly consumption of fish and sea products was
 3.1 kg.
- The average quantity of household monthly consumption of milk was 2.8 litres, 2.8 litres of yogurt and 0.9 kg of different types of cheese.
- The average quantity of household monthly consumption of eggs was 3.5 kg.
- The average quantity of household monthly consumption of olives oil and other oils was 1.2 litres and 4.5 litres, respectively. The average quantity of household monthly consumption of the various types of fats (animal and plant) was 0.4 kg.
- The average quantity of household monthly consumption of fresh fruits was 30.9 kg.
- The average quantity of household monthly consumption of crackers (mixed nuts) was 1.0 kg.
- The average quantity of household monthly consumption of fresh vegetables was 63.1 kg.
- The average quantity of household monthly consumption of tubers was 17.8 kg.
- The average quantity of household monthly consumption of sugar was 9.0 kg.
- The average quantity of household monthly consumption of salt was 2.7 kg.

2.7 Per capita Daily Consumption of Energy and Nutrients

In this section we show the main indicators of per capita daily consumption of energy and food and nutrients:

A. Daily Average Food Energy And Nutrient Availability Per Capita in Palestinian Territory, 2007

Energy and Selected Nutrients	Quantity	Quantity Code	Energy and Selected Nutrients	Quantity	Quantity Code
Energy	2067.7	Kcal	Phosphate	841.7	MI gram
Proteins	57.0	Gram	Iron	14.0	MI gram
Fat	57.4	Gram	Sodium	5412.5	MI gram
Carbohydrates	327.0	Gram	Potassium	2216.4	MI gram
Water	580.0	Gram	Magnesium	282.0	MI gram
Calcium	652.1	MI gram	Vitamin A	383.4	MI gram
Vitamin C	122.3	MI gram			

B. Daily Average Food Energy and Nutrient Availability Per Capita in West Bank, 2007

Energy and Selected Nutrients	Quantity	Quantity Code	Energy and Selected Nutrients	Quantity	Quantity Code
Energy	2059.0	Kcal	Phosphate	863.3	MI gram
Protein	57.2	Gram	Iron	13.8	MI gram
Fat	62.0	Gram	Sodium	5223.6	MI gram
Carbohydrates	314.7	Gram	Potassium	2183.7	MI gram
Water	590.3	Gram	Magnesium	278.3	MI gram
Calcium	626.8	MI gram	Vitamin A	386.3	MI gram
Vitamin C	116.8	MI gram			

C. Daily Average Food Energy and Nutrient Availability Per Capita in Gaza Strip, 2007

Energy and Selected Nutrients	Quantity	Quantity Code	Energy and Selected Nutrients	Quantity	Quantity Code
Energy	2092.3	Kcal	Phosphate	806.1	MI gram
Protein	56.8	Gram	Iron	14.2	MI gram
Fat	49.2	Gram	Sodium	5725.9	MI gram
Carbohydrates	351.1	Gram	Potassium	2286.2	MI gram
Water	563.8	Gram	Magnesium	290.4	MI gram
Calcium	700.0	MI gram	Vitamin A	378.7	MI gram
Vitamin C	132.6	MI gram			

Chapter Three

Methodology

3.1 The Questionnaire

The PECS questionnaire consists of two main parts: (1) A household instrument with control sheet, household roster, housing schedule, and source of income and consumer durable goods schedule; and (2) A special diary for recording items purchased or consumed.

The questionnaire was designed following the UN/ILO recommendations for Household Budget Surveys practiced in most countries since the Second World War. These recommendations follow the concept of National Accounts System 1993 (SNA, 93).

3.2 Sampling and Sampling Frame

3.2.1 Target Population

It consists of all the Palestinian households who are usually resident in the Palestinian Territory.

3.2.2 Sample Frame

The sampling frame consists of all enumeration areas which were enumerated in 1997 and the numeration area consists of buildings and housing units and has an average of about 150 households in it. We use the enumeration areas as primary sampling units PSUs in the first stage of the sampling selection. The enumeration areas of the master sample were updated in 2003.

3.2.3 Sample size

The calculated sample size is 1,714 households.

3.2.4 Sample design

The sample is stratified cluster systematic random sample with two stages:

First stage: selection of a systematic random sample of 120 enumeration areas.

Second stage: selection of a systematic random sample of 12-18 households from each enumeration area selected in the first stage

We selected a person (18 years or more) from each household selected in the second stage.

Sample strata:

We divided the population by:

- 1- Region (North West Bank, Middle West Bank, South West Bank, Gaza Strip)
- 2- Type of Locality (urban, rural, refugee camps)

3.3 Weights Calculations

1.

Calculation of Households Weights:

First we calculate the primary weight for the household from stratum h by the design of sample by dividing the # of households in stratum h on the sample size of households in stratum h by the following equation (1):

1.
$$W_{ih} = \frac{M_h}{n_h}$$
 Therefore: :the code of household stratum : the weight of household i in stratum h

h

 W_{ih}

 M_{h}

 n_h

the # of households in stratum h by from the population census frame in 1997:

the sample size of households in stratum h:

Then we adjust the weights for the respondents to compensate for the non response of households by calculate the factor of weights adjustment by dividing the sample size of household from stratum h on the # of the respondent households from stratum h, by the following equation (2):

$$f_h = \frac{n_h}{r_h}$$

.the factor of weights adjustments in stratum h :
$$f_h$$
 .the sample size of households in stratum h :
$$n_h$$
 .the # respondent households in stratum h :
$$r_h$$

Then the final weight for the households is a multiplications of the factor of the weights adjustment by the primary weights for the household by the following equation (3):

$$w_h = w_h f_h$$

3.4 Field Operations

Four teams of female interviewers, three in the West Bank and one in the Gaza Strip carried out data collection. Each team consisted of a supervisor, a field editor, and 1-2 interviewers. Fieldwork teams were distributed to different districts according to sample allocation.

All field staff received a training session combining general theoretical and practical components. Interviewers, supervisors and editors for the survey were selected from those who worked on the previous rounds of PECS Surveys. Fieldwork procedures and organization were designed to ensure adequate supervision and the collection of high quality data. To this end, several quality control measures were used throughout fieldwork. An interviewer undertook between 120 and 150 household visits in a month. The households were asked to keep daily records in a diary during their recording month. The interviewer transferred the records in a questionnaire on a weekly basis. Data on durable goods were captured by the recall method for the last 12 months (rounds), in order to avoid large variance in estimates when the one-month approach is used.

3.5 Data Processing

Both data entry and tabulation were performed using the ACCESS and SPSS software programs. Data entry was organized in 6 files, corresponding to the main parts of the questionnaire. A data entry template was designed to reflect an exact image of the questionnaire, and included various electronic checks: logical check, range checks, consisting checks and cross-validation. Complete manual inspection of results after data entry was performed, and questionnaires containing field-related errors were sent back to the field for corrections.

Chapter Four

Data Quality

4.1 Accuracy of the Data:

4.1.1 Statistical Errors:

Since the data reported here are based on a sample survey and not on a complete enumeration, they are subject to sampling errors as well as non-sampling errors.

Data of this survey can be affected by statistical errors due to use of the sample. Therefore, the emergence of certain differences from the real values are expected to be obtained through censuses. It had been a calculated variation of the most important indicators that exist and the facility with the report and the dissemination levels of the data were made specific at the regional level .

4.1.2 Non-Statistical Errors:

Non-statistical errors in general referred to the nature of PECS, which can be summarized as follows:

- Many households considered the specific details of the survey as intervention into their own life.
- Israeli impact on the Palestinian Territory (curfew and closure).
- Some households thought the survey related to social assistance or to taxes.
- Hesitation of households in the Jerusalem area to give their data because they were afraid of the Israeli procedures against them if they participate in any Palestinian survey or activity.
- Errors due to non-response because households were away from home or refused to participate. The overall non response rate amounted to almost 28.2% which is relatively low. Much higher rates are rather common from an international perspective. The refusal rate was only 9.9%. It is difficult however to assess the amount of bias resulting from non response.

4.2 Response Rates

The survey sample consists of about 1,714 households interviewed over a twelve months period between (January 2007-January 2008).1,231 households completed the interview, of which 812 were from the West Bank and 419 households in Gaza Strip; the response rate was 71.8% in the Palestinian Territory.

4.3 Data Comparison:

A comparison between survey data and previous surveys occurred on per capita level, and these tables of comparisons were put into the executive summary.

4.4 Technical Notes:

There are important technical notes which should be taken into consideration when reviewing this report, which are as follows:

- The sample size has been reduced compared with previous years, so the level of dissemination was only by region.
- Emphases should be more on per capita data than households because it better reflects the reality.
