

Palestinian Central Bureau of Statistics (PCBS)

Palestinian Producer Price Index, August, 08/2025

Decrease in the Producer Price¹ Index (PPI) during August 2025

The overall Producer Price Index (PPI) for Palestine with its base year (2019 = 100) reached 232.66 in August 2025, as it decreased by 4.78% compared to July 2025.

PPI for locally consumed products during August 2025

Producer Price Index for locally consumed products (2019 = 100) reached 243.92 in August 2025, which indicates a decrease of 5.07% compared to July 2025.

PPI for local exported products during August 2025

Producer Price Index for local exported products (2019 = 100) reached 127.59 in August 2025, which indicates an increase of 0.68% compared to July 2025.

The changes of PPI for August 2025 were traced back to changes in prices of the following major activities compared to the previous month:

Major Activities	Percent Change %
Manufacturing	- 12.33%
Agriculture, forestry and fishing	- 0.79%
Water supply; sewerage, waste management and remediation activities	- 0.02%
Electricity, gas, steam and air conditioning supply	0.00%
Mining and quarrying	0.00%

Notice for Users:

1. The data collection process for agricultural commodities, which was collected in the same reference month, was complete for the West Bank. Due to the Israeli occupation aggression against Gaza Strip since October 7th, 2023, the data for August 2025, were collected through direct phone contact with PCBS fieldworkers working in Gaza Strip focusing on high relative importance within the main major groups in the producer price index.
2. The process of collecting data on industrial goods for the West Bank sample of industrial establishments was complete for August 2025, while in Gaza Strip; the data of all industrial establishments was estimated due to the accelerated Israeli escalation witnessed in Gaza Strip on October 7 during 2023 against all aspects of society.
3. International recommendations were followed in estimating the missing data, which are mentioned in Price Index guide. Moreover, the (Group Relative Method) is one of the best methods used to estimate the missing data, which is the process of estimating the prices based on the change in the prices of the remaining sources for the same category. Accordingly, in case of the closure of an entire source on a temporary basis, all the prices of that source are estimated based on the change in the prices of the sources that share the same items, which are collected from that source.
4. The estimate is also used at the (Next Level Up in Aggregation) in case of the disappearance of the index for a whole sub-group or a higher group reaching up to the major groups that constitute the index.
