Population, Housing and Establishment Census - 2007

Acknowledgement

The Palestinian Central Bureau of Statistics would like to thank all Palestinian Households who responded to the survey instrument, for their understanding during the fieldwork, which was truly remarkable.

The Palestinian National Authority (PNA) and the Core Funding Group (CFG) for 2006 represented by the Representative Office of Norway to PNA; the Representative Office of Netherlands to PNA; Swiss Agency for Development and Cooperation (SDC), Provided the Funding for this Survey.

On this occasion, the PCBS extends special thanks to the members of the Core Funding Group (CFG) who contributed in funding this survey for this support.

Preface

Since its establishment in 1993, the Palestinian Central Bureau of Statistics (PCBS) has been trying its best to provide basic official statistics to Palestinian officials and members of the public on most aspects of the Palestinian life in the West Bank and Gaza Strip.

Within the frame of PCBS' efforts in providing official Palestinian Statistics, and because of the wide spread of Information and Communications Technologies (ICT) mainly; Computer, the Internet, and Mobile Phone among the Palestinian people, and the important role they play in permeating and spreading knowledge and culture and their contribution in formulating the public opinion, PCBS conducted the Households Survey on Information and Communications Technology 2006.

Data presented in this report include many indicators relevant to many subjects related to Computer, Internet, Mobile Phone, expenditures on (ICT) services available to households and individuals, mass media use (audio-visual or written mass media), the prevalence of computers and access to the Internet and Self-Propelled Automatic Messages (SPAM).

The Palestinian Central Bureau of Statistics hopes that this report will enable planners and decision makers to carry out their duties of caring and promoting the (ICT) sector in the Palestinian Territory; and, enlighten decision and policy makers engaged in the comprehensive national development process in the country.

Executive Summary

- A considerable progress on Access and Penetration Indicators of ICT tools among Palestinian households and individuals, in comparison between 2004 and 2006; 72.8% is the percentage of change of households who have access to internet service at home, 24.2% is the percentage of change of households who have a computer, 54.6% is the percentage of change of persons who use the computer, 42.5% is the percentage of change of persons who know how to use the computer.
- Regarding to the telephone line providers, data revealed that 90.3% of the households get the service from the Palestinian telecommunications company, with 86.0% in the West Bank, against 99.8% in Gaza Strip, While 9.7% get the service from BEZEQ (the Israeli telecommunications company), with 13.9% in the West Bank, against 0.2% in Gaza Strip
- Results revealed that 62.7% of the households who have a computer, indicated that the main purpose for having it is for learning, while 17.5% for entertainment purposes, 8.4% for work, 7.1% for improving skills of using the computer, 4.0% for access to Internet, and finally 0.3% for other purposes.
- Furthermore, the findings revealed that the most common purposes for using the Internet (During the last Twelve Months) were; study, entertainment and knowledge purposes (19.3%, 16.5% and 15.0% respectively), with significant differences between males and females, which were for males (12.8%, 20.0% and 16.5% respectively), and (31.2%, 9.9% and 12.3% respectively) for females.
- The findings indicated that 29.9% of the Palestinian households view Palestine TV on a daily basis, with 24.3% in the West Bank against 40.8% in Gaza Strip. While 46.9% of the households view Palestine TV from time to time, with 50.7% in the West Bank and 39.3% in Gaza Strip. Also, 23.2% of the households who have TV do not view Palestine TV, with 25.0% in the West Bank against 19.9% in Gaza Strip.
- Data showed that the monthly average of expenditures for selected (ICT) services and tools that are available at households, were 55.3 NIS, with 50.8 NIS in the West Bank and 64.7 NIS in Gaza Strip. While the maximum average expenditure was for using the Internet at home which amounted to 68.5 NIS, with 64.8 NIS in the West Bank, and 75.4 NIS in Gaza Strip.

Chapter One

Introduction

The Palestinian Central Bureau of Statistics (PCBS) publishes official statistical data to decision makers on different fields in the Palestinian society. Accordingly, it carried out several surveys on different categories of the Palestinian society, one of which is this survey (the Households Survey on Information and Communication Technology, 2006).

1.1 Objectives of the Survey

The main objective of this survey is to provide statistical data on Information and Communication Technology for the Palestinian Households in the Palestinian Territory, the specific objectives can be summarized in the following:-

- The possession of PCs, TV sets, telecommunication means and satellite dish
- Access to the Internet.
- Prevalence of computers and access to the Internet.
- Possession and Use of Recreation Devices.
- Expenditure on (ICT) services available.
- The permeation of Persons Practice in Recreational and Leisure Activities.
- The permeation of newspapers and magazines
- Tendency towards TV and radio stations

1.2 Report structure

This report includes five chapters in addition to the preface. Chapter One is a general introduction about the subject of the survey, its objectives and structure of the report. Chapter Two displays concepts and definitions used in the survey. Chapter Three sets forth the main results of the survey. Chapter Four deals with the methodology used in planning and conducting the survey. Chapter Five discusses the quality of the data.

Concepts and Definitions

Asymmetric Subscriber line (ADSL):	A form of DSL, a data communications technology that enables faster data transmission over copper telephone lines than a conventional modem can provide.
Bluetooth Technique:	An industrial specification for wireless personal area networks, Bluetooth provides a way to connect and exchange information between devices like personal digital assistants, mobile phones, laptops, PCs, printers and digital cameras via a secure, globally unlicensed short range radio frequency.
Computer Use:	It is defined for this survey purposes as the basic uses of the computer (during the last twelve months) like: opening the computer and files as well, create, copy, paste, and saving files.
Cultural Activities:	Refers to a wide range of pertinent activities such as attending social occasions (e.g. weddings, birthdays ...etc), This concept also applies to socializing and meetings inside or outside the house such as discussions, visits, and meetings in public places with household members, friends ...etc. Other activities under this category include indoor or outdoor sports activities, playing cards, doing crosswords and puzzles, and other free time activities.
Digital Subscriber Line DSL):	It is an Internet connection via MODEM and dial-up software utilizing the Public Switch Telecommunications Network (PSTN).
E mail:	It is a mean for exchange messages, texts and attached files among internet or intranet users.
E- Commerce:	It is the conducting of business communication and transactions over computer networks and through individual computers linked to the Word Wide Web. Strictly defined, e-commerce is the buying and selling of goods and services, and the transfer of funds, through digital communications.
Household Membership:	Persons staying in the dwelling unit at the time of an interview are considered members of the household if (1) the dwelling unit is their usual or only place of residence or (2) a place of residence is maintained for them here and elsewhere, but they spend most of their time in this residence.
Household:	One person or a group of persons with or without a family relationship who live in the same dwelling unit, share meals and make joint provisions for food and other essentials of living.
Information Technology and Communications (ICT):	It is used to describe the tools and the process to access, retrieve, store, organize manipulate, produce present and exchange information by electronic and other manual

automated means.

- Internet:** A world-wide public computer network. Organizations and persons can connect their computers to this network and exchange information across a country and/or across the world. The Internet provides access to a number of communication services including the World Wide Web and carries email, news, entertainment and data files.
- Internet Use:** It is defined for this survey purposes as the basic uses of the Internet (during the last twelve months) like: access to certain sites, reading newsletters, and download files or programs from the web.
- Integrated Services Digital Network (ISDN):** A digital access technique for both voice and data. Digital alternative to an analog public switched telephone service and carries data or voltages consisting of discrete steps or levels, as opposed to continuously variable analog data. ISDN enables digital transmission over the PSTN.
- Main Telephone Lines** It is a telephone line connecting the subscriber's terminal equipment to the public switched network and which has dedicated port in the telephone exchange equipment.
- Modulator\Demodulator (MODEM):** A hardware device that enables a computer to transmit and receive information over telephone lines. The modem is responsible for converting the digital data used by your computer into an analog signal used on phone lines and then converting it back once received on the other end.
- Mobile Phone:** The mobile phone that belongs to any telecommunication company.
- Public Library** A library serving the country or a specific area. The beneficiaries could be members of the whole society or of a certain area in return of a fee or not. It could be general or specialized in a certain area of knowledge, e.g. medicine, engineering, military science...etc.
- Reference Date:** The date referred to in calculating ages. In this survey it is 20/04/2006.
- Satellite:** A satellite stationed in geosynchronous orbit that acts as a microwave relay station, receiving signals sent from a ground based station, amplifying them, and retransmitting them on a different frequency to another ground-based station. Satellites can be used for high-speed transmission of computer data.
- Self Propelled Automatic Mail:** It is unsolicited electronic messaging, regardless of its content.
- Wireless:** Includes fixed wireless, mobile wireless and satellite Internet connections

Chapter Three

Main Findings

3.1 Attitudes of Access to Information and Communications Technology Tools

A considerable progress on Access and Penetration Indicators of ICT tools among Palestinian households and individuals, in comparison between years 2004 and 2006; 72.8% is the percentage of change of households who have access to internet service at home, 24.2% is the percentage of change of households who have a computer, 54.6% is the percentage of change of persons who use the computer, 42.5% is the percentage of change of persons who know how to use the computer.

3.2 Access and penetration to Information and Communications Technology Tools

Data showed that the percentage of households who own computer amounted to 32.8%, with 33.9% in the West Bank against 30.8% in Gaza Strip. As for access to the Internet, the findings indicated that 15.9% of the Palestinian households in the Palestinian Territory have access to Internet, with 15.7% in the West Bank against 16.2% in Gaza Strip.

The percentage of households own TV sets amounted to 95.3%; with 96.3% in the West Bank against 93.4% in Gaza Strip, while the percentage of households own satellite dish in the Palestinian Territory is 80.4%; with 82.7% in the West Bank against 75.9% in Gaza Strip. Likewise, the findings indicated that 50.8% of the Palestinian households in the Palestinian Territory have a fixed phone line. The findings also indicated that 81.0% of the Palestinian households comprises at least one member who possess a mobile phone, with 82.1% in the West Bank against 78.6% in Gaza Strip.

The findings also indicated that 37.7% of Persons aged 10 years and over own a mobile phone, with 41.9% in the West Bank against 30.1% in Gaza Strip.

3.3 Telephone Line and Mobile Service Providers

Regarding to telephone line and mobile providers, data revealed that 90.3% of the households get the service from the Palestinian Telecommunications Company, with 86.0% in the West Bank, against 99.8% in Gaza Strip, while 9.7% get the service from BEZEQ (the Israeli telecommunications company), with 13.9% in the West Bank, against 0.2% in Gaza Strip. Regarding to mobile line service providers among persons (10 years and over), 60.9% indicated that JAWWAL Company provides them with the service, with 46.4% in the West Bank, against 96.8% in Gaza Strip. 15.2% indicated that ORANGE Israeli Company provides them with the service, with 19.5% in the West Bank, against 4.6% in Gaza Strip, and 26.5% indicated that CELECOM Israeli company provides them with the service, with 37.1% in the West Bank, against 0.5% in Gaza Strip. Finally, 3.4% indicated that BELEPHONE Company provides them with the service with 4.8% in the West Bank, while the percentage is negligible in Gaza Strip.

3.4 Use of the Computer

Results revealed that 62.7% of the households who have a computer, indicated that the main purpose for having it is for learning purposes, while 17.5% for entertainment purposes, 8.4% for work purposes, 7.1% for improving skills of using the computer, 4.0% for access to Internet, and finally 0.3% for other purposes.

Regarding to the main reason for not having a computer by households, data showed that 77.7% of the households return the reason to the high cost of the computer, with 75.5% in the West Bank against 81.9% of household in Gaza Strip. While 38.6% of the households referred the reason to the fact that no one at the family is qualified for using the computer, (40.9% in the West Bank against 34.3.0% in Gaza Strip).

The data showed that 50.9% of persons (aged 10 years and over) use the computer, with 51.8% in the West Bank against 49.5% in Gaza Strip. While among females and males, the data revealed that 55.3% of males use the computer against 46.4% for females. Also the findings indicated that “home” constitutes the most common place for using the computer (52.0%), 21.0% use it at school or university, 8.2% at work, 7.1% at Internet coffee, and finally 4.6% at other places.

Furthermore, 39.7% of the persons (aged 10 years and over) normally use the computer for entertainment and recreational purposes in the Palestinian Territory, with 38.7% in the West Bank against 41.5% in Gaza Strip, followed for study and educational purposes 38.7%, with 39.4% in the West Bank against 37.5% in Gaza Strip, followed for Internet access (10.0%), with 10.3% in the West Bank against 9.4% in Gaza Strip. While 8.8% use the computer mainly for work, with 8.9% in the West Bank against 8.7% in Gaza Strip.

The main time of using the computer was mainly between 15:00 and 20:00 amounted to 43.7% of users, while 33.6% of the users use it between 8:00 – 15:00, and 22.7% of users use the computer after 20:00 o’clock.

3.5 Use of the Internet

The data revealed that 49.9% of the persons (10 years and over) who use the computer know how to use the Internet. On the other hand, the percentage of persons who actually use the Internet is 18.1% in the Palestinian Territory, this percentage considerably varies between males and females (23.6% and 13.1%, respectively). Moreover, the survey findings indicated that “home” is the most common place for Internet use (49.6%), with considerable differences among males and females, (43.6%, 60.6% respectively).

Furthermore, the findings revealed that the most common purposes for using the Internet were; study, entertainment and knowledge purposes (19.3%, 16.5% and 15.0% respectively), with significant differences between males and females, which was for males (12.8%, 20.0% and 16.5% respectively), and (31.2%, 9.9% and 12.3% respectively) for females.

According to the main time of using the Internet, the data showed 39.7% of users use it between 15:00 and 20:00 o’clock, with 42.6% of users in the West Bank against 34.1% in Gaza Strip. While 39.6% of users use it after 20:00 o’clock, with 35.8% of users in the West Bank against 47.1% of users in Gaza Strip.

As for having e-mail, the findings indicated that 58.3% of persons aged 10 years and over have e-mail, with 57.4% in the West Bank against 60.0% in Gaza Strip, with a noticeable variation between males and females, (63.0% and 49.6% respectively). Also, the data revealed that 93.1% of the e-mail owners use the e-mail for personal mailing, with 95.1% in the West Bank against 89.3% in Gaza Strip.

3.6 Self-Propelled Automatic Messages (SPAM)

Data showed that 57.5% of those who have e-mail usually receive SPAM messages, with 59.1% in the West Bank against 54.4% in Gaza Strip. Moreover, 58.4% of receivers of SPAM messages believed that the Internet Service Providers and the e-mail service Providers are responsible to block such messages, while 28.6% of receivers believed that the SPAM receiver himself is responsible to block these messages, 9.5% of receivers believe that the government is responsible to block SPAM messages.

3.7 Expenditures on (ICT) Services

Regarding to Household's expenditure on certain (ICT) services and tools that Available at Households, which are (programs and repairing programs, accessories and repairing accessories and use of Internet at home). Data showed that the monthly average of expenditures for mentioned services were 55.3 NIS, with 50.8 NIS in the West Bank and 64.7 NIS in Gaza Strip. While the maximum average expenditure was for using the Internet at home which amounted to 68.5 NIS, with 64.8 NIS in the West Bank, and 75.4 NIS in Gaza Strip.

The results showed that 60.3% of the households stated that the monthly payment for using the Internet at home is suitable, against 24.3% considering it as much, 11.3% of households considered the Internet monthly payment too much, and only 4.0% of households considered that payment a little.

Regarding to Individual's expenditure (10 years and over) on certain (ICT) services and tools, which are (mobile lines both Palestinian and Israeli, and use of Internet outside home). Data showed that the monthly average of expenditures for mentioned services were 58.1 NIS, with 69.7 NIS in the West Bank and 20.1 NIS in Gaza Strip. While the maximum average of expenditures was for using the Israeli mobile which amounted to 99.0 NIS in the Palestinian Territory.

3.8 Interest in Palestine TV

The findings indicated that 29.9% of the Palestinian households view Palestine TV on a daily basis, with 24.3% in the West Bank against 40.8% in Gaza Strip. While 46.9% of households view Palestine TV from time to time, with 50.7% in the West Bank and 39.3% in Gaza Strip. Also, 23.2% of the households who have TV do not view Palestine TV, with 25.0% in the West Bank against 19.9% in Gaza Strip.

Regarding to the reason for not viewing Palestine TV, the data showed that 24.2% of the households return the reason to the fact that they couldn't receive Palestine TV transmission signal, with 28.8% in the West Bank and 12.8% in Gaza Strip, while 22.5% because there are other alternatives like satellite channels, with 24.7% in the West Bank and 17.3% in Gaza Strip, and 18.0% due to boring programs presented by Palestine TV, with 15.0% in the West Bank and 25.5% in Gaza Strip

3.9 Cultural Activities

The results showed that 6.2% of persons (aged 10 years and over) are members in Sport Clubs, with 6.9% in the West Bank against 5.0% in Gaza Strip. Also the data showed that 6.0% of persons are members in Charitable Societies, with 4.6% in the West Bank against 8.5% in Gaza Strip. 7.6% of persons are members in Unions or Associations, with 5.9% in the West Bank against 10.7% in Gaza Strip. Only 3.9% of persons are registered in public libraries, with 4.0% of persons in the West Bank against 3.7% in Gaza Strip and 3.1% of

persons are members in Cultural Clubs, with the same percentage in the West Bank and Gaza persons.

Regarding the attendance of symposiums and public lectures, 23.8% of the persons (aged 10 years and over) in the Palestinian Territory indicated that they attend such activities, with 19.0% in the West Bank against 32.2% in Gaza Strip.

Chapter Four

Methodology

4.1 The Survey Questionnaire

The Questionnaire for the Information and Communications Households Survey, 2006, consists of three parts:

The First Part: It is composed of the following:-

First Section: It is composed of identification data, quality control criteria, households members data that include data on demographic, social and economic characteristics such as: age, sex, refugee status, education and main profession.

Second Section: Data on characteristics of housing.

The Second Part: household Questionnaire:

It is composed of questions about computer possessing, access to the Internet, having TV sets, telecommunication means and satellite dish, households expenses on (ICT) available services, and use of recreation devices

The Third Part: Questionnaire of Persons aged (10 years and over):

Use of Computer, access to the Internet, having Mobil Phone, expenses on (ICT) Services available, Self-Propelled Automatic Messages (SPAM), reading newspapers and magazines, the permeation of persons practice in recreational and leisure activities.

4.2 Sample and Sampling Frame

4.2.1 Target Population

The target population consists of all Palestinian households that usually reside in the Palestinian Territory. As for individual data, the target population is the persons aged 10 years and over in the as in the reference date.

4.2.2 Sampling Frame

The sampling frame is the list of enumeration areas peculiar to the 1997 Population, Housing and Establishment Census. Enumeration areas are residential areas containing about 150 housing units in average.

4.2.3 Sample Size

The sample size is, 4609 households of which 3,109 households in the West Bank and 1,500 households in Gaza Strip.

4.2.4 Sample Design

The sample strata have been designed on two levels:

- 1) First level: the governorate (16 governorates).
- 2) Second level: type of locality (urban, rural and camps).

4.2.5 Response Rates

Households and Eligible persons (10 years and over) and their Response Rate by Region, 2006

Sample and Response Rate	Region		
	Palestinian Territory	West Bank	Gaza Strip
Households	4,609	3,109	1,500
Households Interviewed	3,975	2,614	1,361
Response Rate of Households	86.2	84.1	90.7
Males Interviewed (10 years and over)	1,925	1,237	687
Females Interviewed (10 years and over)	1,886	1,211	675

4.2.6 Weighing

Weights have been calculated for each sampling unit. Weight reflects the sampling procedures. To make the weighing procedure feasible and simple, we assumed that the households have been selected directly within the EA.

Adjusted weights are important to reduce bias resulting from non-responses. Also “adjusting” has given consideration to demographic changes since the time of the Population, Housing and Establishments Census, 1997 and the time of carrying out the survey.

Furthermore, when adjusting weights and estimation of the size of population in the Palestinian Territory and their distribution according to age groups in the midst of the second quarter, 2006. Therefore, the results, changes and ratios of this survey represent the reality in the Palestinian Territory during that period.

4.2.7 Variance Calculation

It is necessary to compute standard errors of the principal survey estimations, so that a user can identify the accuracy of estimations and the survey reliability. Total error of the survey can be divided into two kinds: statistical errors; and, non-statistical errors. Non-statistical errors are related to the procedures of statistical work at different stages such as the failure to explain questions in the questionnaire, unwillingness or inability to provide correct responses, bad statistical coverage, etc. These errors depend on the nature of the work, training, supervision, efficiency of design, and conducting with all the various related activities.

The working team in the spared no effort at the different stages, to minimize non-statistical errors; however, it is difficult to estimate numerically such errors due to absence of technical computation methods based on theoretical principles to tackle them.

On the other hand, statistical errors can be measured. Frequently they are measured by the stranded error, which is the positive square root of the variance. The variance of this survey has been computed by using the “programming package” CENVAR whereby the method of Ultimate Cluster is used to calculate variance.

4.3 Reference Date

The reference date for the survey was 20/04/2006.

4.4 Pilot survey

The pilot survey is a miniature reflection of the main Survey. It was designed to include the entire aspects and characteristics for the purpose of carrying out the Survey and included checking training, fieldwork, Survey's questionnaire, interviewing, data processing, and the sample.

A sample of 72 households was selected from Nablus governorate representing urban, rural and camp localities. An enumeration area was selected in each type of locality and then a sample was chosen from each enumeration area.

The fieldwork commenced on March 18th, 2006 and went on for 3 days then a meeting with interviewers was held in order to discuss their remarks. The questionnaire and training manuals and other documents were then evaluated and amended in accordance with the recommendations.

4.5 Field Work Operations

4.5.1 Instructions and Training manual

The training manual covered all aspects dealing with fieldwork and filling in questionnaires. Moreover, it dealt with the tasks of each fieldworker, interviewing, and questionnaires' completion. More training manuals for supervisors and editors were prepared in order to secure team training and success of project. A training course was held in Ramallah and in Gaza city on April 22nd, 2006, and was completed on April 26th, 2006 with the participation of 74 trainees. Training lasted for 5 days for fieldworkers and additional one days for supervisors, editors, and assistants.

The training of trainees was divided into two parts: **The first part** discussed general issues such as designing statistical surveys, reaching selected households, interviewing, tasks and duties and running the fieldwork. **The second part** emphasized the objectives of the Survey and allowed exercises on filling in questionnaires.

4.5.2 Main fieldwork

A plan for the fieldwork for both regions was developed. At this stage, the fieldwork team and the tools (questionnaires, maps, sample lists) were prepared.

4.5.3 Data editing in the field

The project's management developed a clear mechanism for editing the data and trained the team of editors accordingly. The mechanism was as follows:

- Receiving completed questionnaires on daily basis;
- Checking each questionnaire to make sure that they were completed and that the data covered all eligible individuals. Checks also focused on the accuracy of the answers to the questions.
- Returning the uncompleted questionnaires as well as those with errors to the field for completion.

- Re-interviewing 10% of the sample households using a special questionnaire for the supervisors to ensure the accuracy of the data when compared to the interviewers' completed questionnaires.

4.5.4 Following up and supervision

Special follow-up patterns were designed for handing in and receiving questionnaires for all levels as well as the daily accomplishments of the interviewers. Supervisors had the task of allocating work to the teams using the map and the list. They provided daily and weekly reports to the fieldwork coordinator and the project's administration explaining the completed interviews, refusal cases, the inapplicable cases such as vacant housing units, interviews were results were not determined, and the cases that could not be communicated (after three contact attempts). The reports also included the technicians and coordinators' supervisory field visits.

4.6 Data Processing

4.6.1 Preparation of Data Entry Programme

At this stage data entry programme has been prepared using ACCESS package. Data entry screens have been designed. Also, rules of entry have been put, in a manner that guarantees successful entry of questionnaires and verification instructions to check data after each entry. These instructions examine the variables on the questionnaire level.

4.6.2 Data Entry

After having designed the data entry programme and testing it to verify readiness; and, after having trained staff on dealing with data entry programme, data entry started on May 3rd, 2006 and finished in May 28th, 2006. The process of data entry was correlated with receipt of questionnaires from the field, whereby 15 staff members have been engaged in data entry and verification of questionnaires. Data entry has taken place during two shifts, morning and evening, to secure achievement of data entry on time.

Final tabulation of results was performed using the statistical package SPSS for Windows (version 12.0).

Data Quality

5.1 Introduction

Since the data reported here are based on a sample survey and not on complete enumeration, they are subjected to two main types of errors: sampling errors and non-sampling errors.

Sampling errors are random outcomes of the sample design and are, therefore, easily measurable.

Non-sampling errors can occur at various stages of the survey implementation in data collection and data processing and are generally difficult to be evaluated statistically. They cover a wide range of errors, including errors resulting from non-response, sample frame coverage, data processing and response (both respondent and interviewer-related). The use of effective training and supervision and the careful design of questions are measures that have direct bearing on the magnitude of non-sampling errors and, hence, on the quality of the resulting data.

5.2 Evaluation of Demographic and Social Data

There are different methods to evaluate data varying according to subjects and they include:

1. Frequency of missing values and responses like “other” or “Do not know” and examining data inconsistency between the different sections like birth date and other sections.
2. Comparison of survey data with other external sources of countries similar in situation to the Palestinian Territory; and also, with results of surveys related that have been completed in the Palestinian Territory like the Population, Housing and Establishments Census-1997 and other Surveys.

Demographic Characteristics Related to Birth Date:

Eligible individual is identified according to birth date obtained from birth certificate, identity card or any other official document. There could be some errors in age of individuals with no such documents. Accuracy in identifying birth date is due to the fact that the survey focuses on specified age groups, as age is all-important in shaping the individual’s opinion. We have based our computation of age on the individual’s birth date and date of interview 20/04/2006.

Errors on recording age result from age reporting while providing information; the lack of comprehending the question peculiar to age; and, error of data entry on age. Most important: the ignorance of actual age by the respondent. Errors of reporting age are common to all surveys and this survey is no exception. However; the level of errors committed and the risk encountered varies from one survey to another. It is worth noting that when questions relating to the whole number of years of age and birth dates have been posed, official documents have been used to obtain data for this survey.

Regarding to household’s and person’s expenditures on ICT available services, we proceed the missing cases (Do Not Know) in the set of variables related to ICT expenses based on the average expenditure values for each certain indicators and also the ICT expenses are specified to such ICT available services to households and Individuals.
